Information contained in this presentation containing descriptions of any mineral deposits may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under United States federal securities laws and the rules and regulations thereunder that disclose mineral reserves and mineral resources, including the SEC’s new mining disclosure rules in Regulation S-K Subpart 1300 (“S-K 1300”). Under S-K 1300, reserve and resource definitions are substantially similar to the corresponding definitions under Canadian rules, including the Canadian Institute of Mining, Metallurgy and Petroleum Definition Standards. However, there are differences between National Instrument 43-101 – Standards of Disclosure for Mineral Projects (“NI 43-101”) and S-K 1300, and therefore information contained in the presentation may not be comparable to similar information made public by public U.S. companies pursuant to Regulation S-K 1300.

2. USD values used to calculate AuEq; Au \$1600.0/oz, Ag \$20.0/oz, Pb \$1984.2/mt, Zn \$2,755.6/mt. Formula used: AuEq = Gold g/t + Silver g/t x 0.0125 + Zinc % x 0.5357 + Lead % x 0.3857. Values may not add precisely due to rounding. Gold equivalent (AuEq) is used for illustrative purposes, to express the combined value of Au, Ag, Pb, and Zn as a percentage of Au. Metallurgical Assumed recoveries are 90% for Au, 77% for Ag, 83% for Pb, 90% for Zn, based on recoveries at the Olympias Mine, a deposit of the same type.
