Company Overview and Ikkari Project update

RUP-TSX September 2023

> CAUTIONARY STATEMENT

{All figures are in US\$ unless otherwise noted}

Cautionary Note Regarding Forward-Looking Information

This document contains certain forward-looking statements or "forward looking information" within the meaning of applicable securities laws, relating but not limited to Rupert Resource Ltd. (the "Company")'s expectations, intentions, plans and beliefs. Forward-looking information can often be identified by forward-looking words such as "anticipate", "believe", "expect", "goal", "plan", "intent", "estimate", "may" and "will" or similar words suggesting future outcomes or other expectations, beliefs, plans, objectives, assumptions, intentions or statements about future events or performance. Forward-looking information may include: the Company's outlook and results of its strategy, reserve and resource estimates, targeted gold discoveries, the Company's funding requirements, realising value for shareholders, future gold prices, the Company's ability to increase resources, estimates of future production, unit costs, costs of capital projects and timing of commencement of operations, and is based on current expectations that involve a number of business risks and uncertainties.

Factors that could cause actual results to differ materially from any forward-looking statement include, but are not limited to, failure to establish estimated resources and reserves, the grade and recovery of mined ore varying from estimates, capital and operating costs varying significantly from estimates, delays in obtaining or failures to obtain required governmental, environmental or other project approvals, inflation, changes in exchange rates, fluctuations in commodity prices, the impact of the new coronavirus (COVID-19) on the Company's operations and global economic conditions, delays in the development of projects and other factors.

Forward looking statements

Potential shareholders and prospective investors should be aware that these statements are subject to known and unknown risks, uncertainties and other factors that could cause actual results to differ materially from those suggested by the forward-looking statements. Investors are cautioned not to place undue reliance on forward-looking information. By its nature, forward-looking information involves numerous assumptions, inherent risks and uncertainties, both general and specific, that contribute to the possibility that the predictions, forecasts, projections and various future events will not occur. The Company undertakes no obligation to update publicly or otherwise revise any forward-looking information whether as a result of new information, future events or other such factors which affect this information, except as required by law.

This information is qualified in its entirety by cautionary statements and risk factor disclosure contained in filings made by the Company, including the Company's Annual Information Form for the year ended February 28, 2022 filed with the securities regulatory authorities in certain provinces of Canada and available at www.sedar.com.

November 2022 Preliminary Economic Assessment and resource estimate for the Ikkari and Pahtavaara Projects.

The Mineral Resource estimate included in the Preliminary Economic Assessment ("Study" or "PEA") is reported according to the classification criteria set out in the Canadian Institute of Mining, Metallurgy, and Petroleum Definition Standards for Mineral Resources and Reserves ("CIM Definition Standards"). These standards are internationally recognized and allow the reader to compare the Mineral Resource with that reported for similar projects. The results of the PEA will be set forth in an independent technical report prepared in accordance with National Instrument 43-101 *Standards of Disclosure for Mineral Projects* ("NI 43-101") which will be filed on SEDAR under the Company's profile within 45 days of the date of this news release.

Readers are cautioned that the PEA is preliminary in nature and is intended to provide an initial assessment of the project's economic potential and development options. The PEA mine schedule and economic assessment includes numerous assumptions and is based on both Indicated and Inferred Mineral Resources. Inferred Resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the PEA results will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability. Additional exploration will be required to potentially upgrade the classification of the Inferred Mineral Resources to be considered in future advanced studies.

The PEA was prepared by Tetra Tech for Rupert Resources. The study was managed by EUR ING Andrew Carter BSc, CEng, MIMMM, MSAIMM, SME Technical Director Coffey Geotechnics Ltd – A Tetra Tech Company, who is a Qualified Person under National Instrument 43-101 and has reviewed and approved the scientific and technical information in this press release. TetraTech has prepared the PEA according to AACE International Recommended Practice No. 18R-97 to a Class 4 cost estimate classification. Dr Matthew Randall, BSc, PhD, CEng, MIMMM, Director and Principal Mining Engineer for Axe Valley Mining Consultants Ltd is the qualified person for the mining components of the report.

The independent and qualified person for the Mineral Resource Estimates as defined by NI43-101 is Brian Wolfe, Principal Consultant, International Resource Solutions Pty Ltd. These are mineral resources not mineral reserves as they do not have demonstrated economic viability. Results are presented in situ. Ounce (troy) = metric tonnes x grade / 31.103475. Calculations used metric units (meters, tonnes, g/t). Any discrepancies in the totals are due to rounding effects.

The effective date of the 2022 Mineral Resource Estimate for Ikkari is 28 November 2022. The Mineral Resource Estimate at Ikkari is calculated using the multiple indicator kriging (MIK) method and is reported both within a designed open pit and as a potential underground operation outside that. The Mineral Resource Estimate at Ikkari is reported using a cutoff grade of 0.5g/t Au for mineralisation potentially mineable by open pit methods and 1.0g/t Au for mineralisation potentially extractable by underground methods. The potential open pit mine and cut off-grade is calculated using a gold price at \$1650 per ounce, 5% mining dilution, 95% Au recovery. Open pit mining costs at \$2.5/t, process costs at \$11.3/t, other costs (includes co-disposal, water and closure) at \$4.0/t and G&A including royalties and refining at \$3.2/t. The calculated cutoff grade is rounded up to 0.5g/t for reporting. The underground cutoff grade is calculated at underground mining cost \$21.8/t and underground mining dilution at 8% based on sub level caving. The calculated underground cutoff grade is rounded up to 1.0g/t as the resource is not constrained within mineable shapes.

The effective date of the 2022 Mineral Resource Estimate for Pahtavaara is 28 November 2022 and the Mineral Resource Estimate at Pahtavaara is calculated using the multiple indicator kriging (MIK) method. The Mineral Resource Estimate is reported both within a designed open pit and as a potential underground operation outside that. The Mineral Resource Estimate at Pahtavaara is reported using a cutoff grade of 0.5g/t Au for mineralisation potentially mineable by open pit methods and 1.5g/t Au for mineralisation potentially extractable by underground methods. The potential open pit mine and cut off-grades are calculated using a gold price at \$1650 per ounce, 20% mining dilution, 89% Au recovery, and a mining cost at \$2.6/t, process cost at \$10.2/t (concentration at Pahtavaara and transport to Ikkari), other costs (includes TSF costs and closure) at \$1/t and G&A including royalties and refining at \$3.1/t. The calculated cutoff grade is rounded up to 0.5g/t for reporting. The underground cutoff grade is calculated at underground mining cost \$49.6/t and underground mining dilution at 10% based on long hole open stoping. The calculated underground cutoff grade is 1.5g/t.

The effective date of the 2022 Mineral Resource Estimate for Heinä Central is 28 November 2022 and the Mineral Resource Estimate for Heinä Central is calculated using the ordinary kriging (OK) method. The Mineral Resource Estimate is reported both within an optimised open pit and as a potential underground operation outside that. The Mineral Resource Estimate is reported at a 0.5g/t Au cutoff grade for mineralisation potentially mineable by open pit methods and at 1.2g/t Au for mineralisation potentially extractable by underground methods. The potential open pit mine and cutoff grade are calculated using a gold price at \$1650/oz, 5% mining dilution, 78% Au recovery. Open pit mining costs at \$2.5/t, process costs at \$10.01/t (concentrate production at Heinä and transport to Ikkari), other costs (includes TSF and closure) at \$3.20/t and G&A including royalties and refining at \$1.66/t. The calculated open pit cutoff grade is rounded up to 0.5g/t for reporting. The underground cutoff grade is calculated at underground mining cost \$30/t and underground mining dilution of 5%. The calculated underground cut of grade is rounded up to \$1.2g/t for reporting. The Heinä Central deposit also contains potentially recoverable copper. At the 0.5g/t Au cut-off grade for mineralisation potentially mineable by open pit methods Heinä Central also contains 12,000 tonnes of in situ copper. At the 1.2g/t Au cut-off grade for mineralisation potentially mineable by underground methods Heinä Central also contains 1,800 tonnes of in situ copper. No economic value is applied to the copper content when designing optimised open pit or calculating the potential cut-off grade at Heinä Central.

Cautionary Note to U.S. Investors Concerning Resource Estimate

This presentation has been prepared in accordance with the requirements of the securities laws in effect in Canada, which differ in certain material respects from the disclosure requirements promulgated by the Securities and Exchange Commission (the "SEC"). For example, the terms "mineral reserve", "proven mineral reserve", "probable mineral reserve", "mineral resource", "measured mineral resource", "indicated mineral resource" and "inferred mineral resource" are Canadian mining terms as defined in accordance with Canadian National Instrument 43-101 Standards of Disclosure for Mineral Projects and the Canadian Institute of Mining, Metallurgy and Petroleum (the "CIM") - CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as amended. These definitions differ from the definitions in the disclosure requirements promulgated by the SEC. Accordingly, information contained in this presentation may not be comparable to similar information made public by U.S. companies reporting pursuant to SEC disclosure requirements.

Review by Qualified Person, Quality Control and Reports

Dr Charlotte Seabrook MAIG, RPGeo, Exploration Manager is the qualified person, as defined by NI 43-101, responsible for the accuracy of, and has approved the, scientific and technical information in this document.

> HIGH-QUALITY BY DEFINITION

A demonstrably long-life
high-margin asset in a
Tier 1 jurisdiction

AN "ALL-WEATHER" DISCOVERY

A gold deposit with the potential for exceptional returns through all cycles

HIGH-QUALITY OUNCES; HIGH-INVESTOR RETURNS

Cohesive deposit comprised of broad intervals of strong and consistent gold mineralization – low sensitivity to varying cut-offs;

SIGNIFICANT VALUE REMAINS

Resource update Q4 2023 and +50,000m drilling planned for 2023/24 with emphasis on extensions and exploration

DE-RISKED

PEA completed, PFS due Q2 2024, EIA program in progress

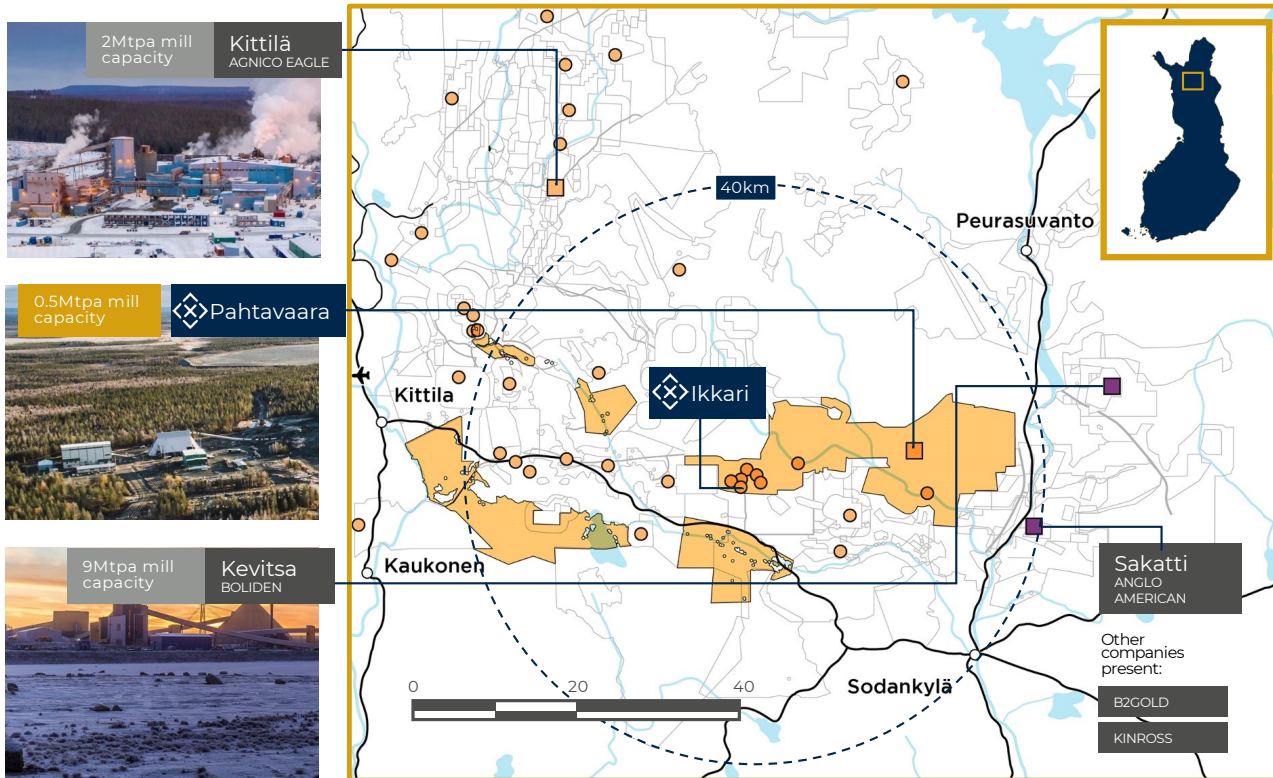

PREMIUM LOCATION

Finland ranked one of the best mining jurisdictions ; property access to road and access to renewable power

> CENTRAL LAPLAND – A NEW “TIER 1” DESTINATION

Growing mineral inventory and established mining infrastructure

	MT	Au g/t	CuEq %	Moz AuEq
Rupert Lapland (Ikkari and Pahtavaara)				
Indicated Resources	48.3	2.5	—	3.9
Inferred Resources	20.4	1.9	—	1.3
Kevitsa BOLIDEN				
P&P Reserves	129.0	—	1.1	6.1
M&I Resources	175.0	—	1.1	8.1
Kittilä AGNICO EAGLE				
P&P Reserves	30.0	4.2	—	4.1
M&I Resources	23.0	2.5	—	1.8
Inferred Resources	12.0	3.8	—	1.5
Sakatti ANGLO AMERICAN				
Indicated Resources	3.5	—	11.3	1.7
Inferred Resources	41.0	—	4.7	8.3

> IKKARI DISCOVERY HISTORY AND CRITICAL PATH

> SENIOR MANAGEMENT AND PROJECT TEAM

JAMES WITHALL, CHIEF EXECUTIVE OFFICER

James Withall joined Rupert Resources in April 2017 and has over 25 years' experience in mining. He was previously a Managing Partner and Fund Manager at Baker Steel Capital Managers. Prior, James worked for more than seven years as a geologist, working in Western Australia for number of gold mining companies in exploration, project and mine geologist roles, before joining the development team of the Xstrata Windimurra vanadium project. James has a degree in Applied Geology from Leicester University and a Masters in Mineral Project Appraisal from Imperial College, London.

JEFFREY KAROLY, CHIEF FINANCIAL OFFICER

Jeffrey Karoly is a Chartered Accountant with a degree in Geology from the University of Bristol. He has worked in the mining sector for over 25 years including 11 years in corporate finance roles with Anglo American on three continents. Since 2008 he has been Chief Financial Officer of several listed junior resource companies including AIM & TSX-listed Horizonte Minerals and Condor Gold.

THOMAS CREDLAND, HEAD OF CORPORATE DEVELOPMENT AND CHIEF SUSTAINABILITY OFFICER

Thomas is a geologist with over 20 year's experience in mining. Thomas began his career in the gold mining industry in Western Australia before returning to the United Kingdom to work as a mining analyst. He then worked in an institutional equity sales role at Canaccord before moving into a senior corporate position at a London listed mining company. Thomas holds a degree in Geology from the University of Edinburgh and a Masters in Mineral Project Appraisal from Imperial College, London.

JUKKA NIEMINEN, MANAGING DIRECTOR OF RUPERT FINLAND

Jukka was instrumental in the acquisition of the Pahtavaara Project for the Company and is a geologist with over 20 years of experience in the mining industry. He started his career with Outokumpu at the Forrestania Nickel mines in Western Australia before returning to Finland to work as a mine geologist at the Pahtavaara and the Orivesi Gold mines. Latterly Jukka was General Manager of Belvedere Mining's Hitura nickel mine and CEO of the Belvedere's Finnish operating subsidiary.

KALLE-PEKKA KOTIAHO, EXPLORATION MANAGER

Kalle-Pekka Kotiaho joined Rupert Resources in 2018 and was a key member of the Ikkari Discovery team from pre-drilling grassroots exploration in Area 1 to publication of its multi-million maiden resource in 2021. Kalle's current focus is on developing understanding of Ikkari and potential satellite orebodies through the feasibility and engineering stages whilst progressing Rupert's disciplined and systematic regional exploration campaign in parallel. Kalle is a geologist with an MSc in Geology from Åbo Akademi University from Turku, Finland Prior to joining Rupert Resources he worked on other mining and exploration projects in northern Fennoscandia.

HILLAMARIA MÄKINEN, HUMAN RESOURCES AND COMMUNICATIONS MANAGER

Hillamaria Mäkinen is a human resources specialist with an MA English Philology from The University of Tampere and an MSc in Leadership from The University of Rovaniemi. Hillamaria joined the company in 2021 to manage stakeholder engagement and communications and to progress the human resources function as the business in Finland develops.

TUULA ROIMAA, PRINCIPAL PROCESS ENGINEER.

Tuula previously held the roles of Chief Metallurgist for Boliden's Kevitsa base metals operation and Chief Metallurgist at Agnico Eagle's Kittila mine and has extensive experience in both gold and base metals recovery.

ANNIINA SALONEN, ENVIRONMENTAL MANAGER

Anniina Salonen is an Environmental Engineer with over 10 years of experience in the mining industry. Prior to joining Rupert Resources in 2021, Anniina worked with First Quantum Minerals and Boliden at the operating Kevitsa polymetallic mine in Northern Finland, located 50km from Rupert Resources' Ikkari Discovery. At Kevitsa, Anniina developed the mine's environmental management and sustainable mining practices as well as managing relations with government authorities and environmental permitting processes. Anniina holds a BEng in Environmental Engineering from Savonia University of Applied Sciences and an MSc in Technology (Sustainability) from Lappeenranta University of Technology.

ANDRÉ VAN WAGENINGEN, STUDY MANAGER

André van Wageningen is a Mining Engineer and MBA with over 20 years of international experience from Canada, Sweden and Finland. Throughout his career his focus has been on mine planning and implementing mining technology advancements. Prior to joining Rupert Resources in 2023, André worked in the Nordic region for Boliden and Agnico Eagle in different mining related roles. André holds an MSc in Mining Engineering from Delft University of Technology and an MBA from Heriot-Watt University – Edinburgh Business School.

> PEA PRODUCTION SUMMARY

		Years 1 to 11	LOM (22 years)
Milled tonnes	Million tonnes	37.9	71.6
Mill throughput	Million tonnes per annum	3.5	3.5
Strip ratio	Waste : Ore	3.6	4.6
Average processed gold grade	Grams per tonne	2.1	1.9
Average metallurgical recovery	%	95	95
Average annual gold production	000 troy ounces	220	200
Recovered gold	Million troy ounces	2.4	4.2
Total Cash Cost	USD / troy ounce	501	667
Sustaining capital	USD / troy ounce	95	93
*All in Sustaining Cost (AISC)	USD / troy ounce	596	759

See the Company's November 28, 2022 press release for further information. In compliance with National Instrument 43-101, Dr Charlie Seabrook, RPCGeo., is the Qualified Person who supervised the preparation of the scientific and technical disclosure in this news release.

*As per the World Gold Guidance ([Gold All in Sustaining Costs | Gold AISC | World Gold Council](#)), the objective of the all-in sustaining costs ("AISC") metric is to provide key stakeholders (i.e. management, shareholders, governments, local communities, etc.) with comparable metrics that reflect as close as possible the full cost of producing and selling an ounce of gold, and which are fully and transparently reconcilable back to amounts reported under Generally Accepted Accounting Principles ("GAAP") as published by the Financial Accounting Standards Board ("FASB" also referred to as "US GAAP") or the International Accounting Standards Board ("IASB" also referred to as "IFRS"). AISC and AIC are non-GAAP metrics subject to regulatory and disclosure requirements of the various jurisdictions applicable to the reporting company.

		Total		2,700,000	1.8	4,700	150,000
Inferred Total				20,400,000	1.9	39,000	1,260,000

2022 estimate assumptions

Cut-off grades determined at each target based on unit operating costs per tonne. Please see slide 33 for resource sensitivity to cut off grade.

Ikkari – Open Pit Mining \$2.5, Underground Mining \$21.8 Processing \$11.3, Other \$4.0, G&A incl Royalties & Refining \$3.2. Recovery of 95%

Pahtavaara – Open Pit Mining \$2.6, Underground Mining \$49.6, Processing \$10.2, Other \$1.0, G&A incl Royalties & Refining \$3.1. Recovery of 89%

Heinä Central - Not Included in PEA mine plan – Open Pit Mining \$2.5, Underground \$30, Processing \$10, Other \$3.2, G&A Royalties and Refining \$1.7. Recovery 78%. Copper credit not included.
