

# GROWING GOLD RESOURCES IN QUEBEC'S ABITIBI

## Corporate Presentation

Precious Metals Summit, Beaver Creek

September 9-12, 2025

TSX: WM OTCQB: WLBMF

[wallbridgeminig.com](http://wallbridgeminig.com)

# Cautionary Note Regarding Forward-Looking Information

This presentation contains forward-looking statements or information (collectively, "FLI") within the meaning of applicable Canadian securities legislation. FLI is based on expectations, estimates, projections, and interpretations as at the date of this presentation.

All statements, other than statements of historical fact, included herein are FLI that involve various risks, assumptions, estimates and uncertainties. Generally, FLI can be identified by the use of statements that include words such as "seeks", "believes", "anticipates", "plans", "continues", "budget", "scheduled", "estimates", "expects", "forecasts", "intends", "projects", "predicts", "proposes", "potential", "targets" and variations of such words and phrases, or by statements that certain actions, events or results "may", "will", "could", "would", "should" or "might", "be taken", "occur" or "be achieved."

FLI herein includes, but is not limited to, statements regarding the results of the Preliminary Economic Assessment ("PEA"), including the production, operating costs, capital expenditures and total cash cost estimates, the projected valuation metrics and rates of return, and the cash flow projections, as well as the anticipated permitting requirements and Project design, including processing and tailings facilities, infrastructure developments, metal recoveries, mine life and production rates for the Project, the potential to further enhance the economics of the Project and optimize the design, potential timelines for obtaining the required permits and financing, parameters and methods used to estimate the mineral resource estimates (each an "MRE") at Fenelon and Martiniere (collectively the "Deposits"); the prospects, if any, of the Deposits; future drilling at the Deposits; and the significance of historic exploration activities and results. Forward-looking information is not, and cannot be, a guarantee of future results or events. FLI is designed to help you understand management's current views of its near- and longer-term prospects, and it may not be appropriate for other purposes. FLI by their nature are based on assumptions and involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance, or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by such FLI. Although the FLI contained in this document is based upon what management believes, or believed at the time, to be reasonable assumptions, the Company cannot assure shareholders and prospective purchasers of securities of the Company that actual results will be consistent with such FLI, as there may be other factors that cause results not to be as anticipated, estimated or intended, and neither the Company nor any other person assumes responsibility for the accuracy and completeness of any such FLI. Except as required by law, the Company does not undertake, and assumes no obligation, to update or revise any such FLI contained in this document to reflect new events or circumstances. Unless otherwise noted, this document has been prepared based on information available as of the date of this document. Accordingly, you should not place undue reliance on the FLI, or information contained herein.

Furthermore, should one or more of the risks, uncertainties or other factors materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in FLI.

Assumptions upon which FLI is based, without limitation, include: the results of exploration activities, the Company's financial position and general economic conditions; the ability of exploration activities to accurately predict mineralization; the accuracy of geological modelling; the ability of the Company to complete further exploration activities; the legitimacy of title and property interests in the Deposits; the accuracy of key assumptions, parameters or methods used to estimate the MREs and in the PEA; the ability of the Company to obtain required approvals; geological, mining and exploration technical problems; and failure of equipment or processes to operate as anticipated; the evolution of the global economic climate; metal prices; foreign exchange rates; environmental expectations; community and non-governmental actions; and, the Company's ability to secure required funding. Risks and uncertainties about Wallbridge's business are discussed in the disclosure materials filed with the securities regulatory authorities in Canada, which are available at [www.sedarplus.ca](http://www.sedarplus.ca).

## Cautionary Note to United States Investors

Wallbridge prepares its disclosure in accordance with NI 43-101 which differs from the requirements of the U.S. Securities and Exchange Commission (the "SEC"). Terms relating to mineral properties, mineralization and estimates of mineral reserves and mineral resources and economic studies used herein are defined in accordance with NI 43-101 under the guidelines set out in CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the Canadian Institute of Mining, Metallurgy and Petroleum Council on May 19, 2014, as amended. NI 43-101 differs significantly from the disclosure requirements of the SEC generally applicable to US companies. As such, the information presented herein concerning mineral properties, mineralization and estimates of mineral reserves and mineral resources may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the U.S. federal securities laws and the rules and regulations thereunder.

## Cautionary Notes and Definitions Regarding PEA

On March 27, 2025, the Company announced positive results from the PEA completed on Fenelon. The 2025 MRE formed the foundation for the PEA which assessed the potential for a predominantly underground mining operation at the Fenelon Gold Project. The Company cautions that the results of the PEA are forward-looking and preliminary in nature and include inferred mineral resources that are considered too speculative geologically to have economic considerations applied to them to be classified as mineral reserves. There is no certainty that the results of the PEA will be realized. The PEA financial economic analysis is significantly influenced by gold prices. The following summary includes certain non-IFRS financial measures, such as free cash flow, initial capital expenditures, sustaining capital expenditures, total cash costs and all in sustaining costs, which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS. The disclosure of such non-IFRS financial measures is required under National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43-101") and has been prepared in accordance with NI 43-101. Although reconciliations to equivalent historical measures are not available. Please refer to the cautionary language and non-IFRS financial measures for detailed definitions and descriptions of such measures.

## QP - Statement

All scientific and technical data related to the 2025 PEA contained in this document has been reviewed and approved by Mr. Marc R. Beauvais, P.Eng, of InnovExplo, who was responsible for compiling the PEA technical report. By virtue of his education, membership in a recognized professional association and relevant work experience, Mr. Beauvais is an independent QP as defined by NI 43-101.

All scientific and technical data related to the 2025 MREs contained in this document has been reviewed and approved by Mr. Mauro Bassotti (P.Geo.) who is an independent mineral resource consultant and a QP as defined by NI 43-101.

All scientific and technical data related to geology and exploration information concerning the Detour Fenelon Gold Trend Property contained in this document has been reviewed and approved by Mr. Mark A. Petersen, M.Sc., P.Geo. (PGO 3069; OGQ AS-10796), Senior Exploration Consultant for Wallbridge and a QP as defined by NI 43-101.

### All results are reported in Canadian dollars unless otherwise indicated.

#### Non-IFRS Financial Measures

Wallbridge has included certain non-IFRS financial measures commonly used in the mining industry in this news release, such as initial capital expenditures, sustaining capital expenditures, total cash costs and all-in sustaining costs, which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS. As a result, these measures may not be comparable to similar measures reported by other companies. Each of these measures used are intended to provide additional information to the user and should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS. Non-IFRS financial measures used in this news release and common to the gold mining industry are defined below.

#### Total Cash Costs and Total Cash Costs per Ounce

Total cash costs are reflective of the cost of production. Total cash costs reported in the PEA include mining (UG and OP), processing, water treatment and tailings, minesite G&A and royalty costs. Total cash costs per ounce is calculated as total cash costs divided by payable gold ounces.

#### All-In Sustaining Costs and All-In Sustaining Costs per Ounce

All-in sustaining costs and all-in sustaining costs per ounce are reflective of all of the expenditures that are required to produce an ounce of gold from operations. All-in sustaining costs reported in the PEA include total cash costs, sustaining capital expenditures, closure costs, but exclude corporate general and administrative costs. All-in sustaining costs per ounce is calculated as all-in sustaining costs divided by payable gold ounces.

A description of the significant cost components that make up the forward looking non-IFRS financial measures of total cash costs and all-in sustaining costs per ounce of payable gold produced is shown in the table below.

#### Free Cash Flow

Free cash flow was estimated as the amount of cash generated by Fenelon after all operating and capital expenditures have been paid.

#### Initial Capital Expenditures and Sustaining Capital Expenditures

Initial and sustaining capital expenditures in the PEA were estimated based on current costs received from vendors as well as developed from first principles, while some were estimated based on factored references and experience from similar operating projects. Initial capital expenditures represent the construction and development costs to achieve commercial production and sustaining capital expenditures represent the construction and development costs subsequent to commercial production.

# THE ABITIBI GREENSTONE BELT

## Comparing Northern and Southern Abitibi

### Northern and Southern Abitibi

- Similar geology
- World-class potential demonstrated
- Less exploration maturity due to:
  - *Less accessible in the past*
  - *Farther from urban centers*
  - *Limited surface outcrops*

1. Total cash costs per ounce are operating costs, composed of mining (UG and OP), processing, water treatment and tailings, minesite G&A and royalty costs, divided by payable gold ounces.

2. Non-IFRS financial performance measures with no standardized definition under IFRS. Refer to Non-IFRS Measures on slide 3 of this presentation.

3. All-in sustaining cost/oz ("AISC") includes operating costs, sustaining capital expenditures to support the on-going operations, and closure costs, divided by payable gold ounces.

# FENELON PEA APPROACH

## First principles approach, realistic costs

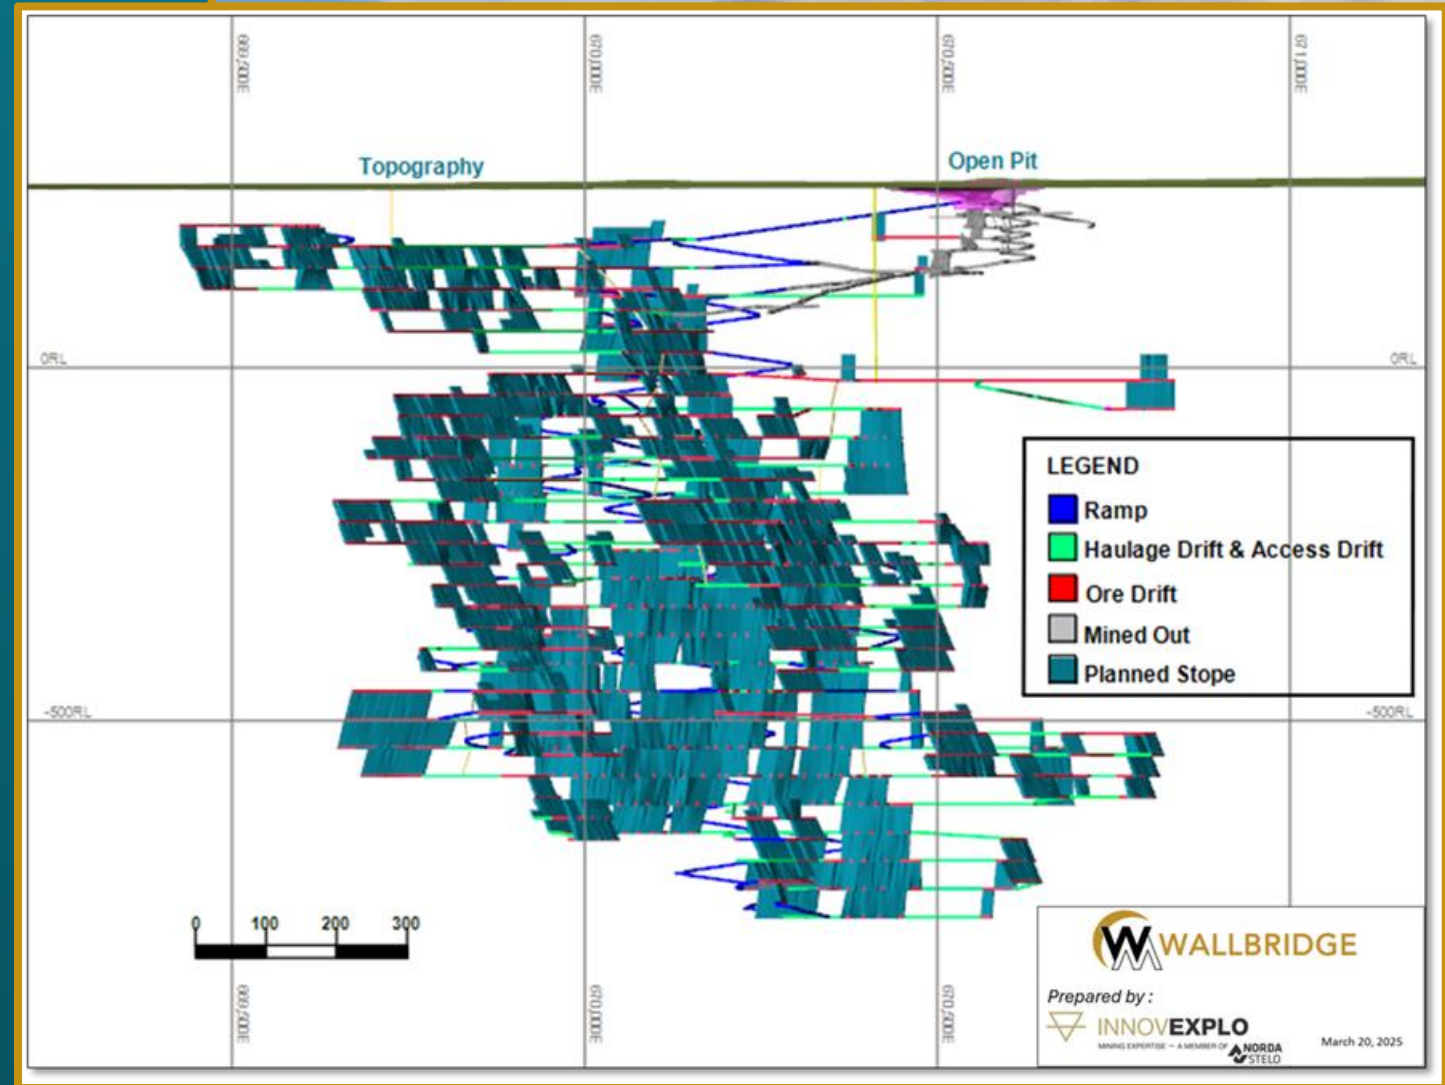

**First Principles:** new project starting with a clean slate

**Stope Optimization:** Iterative process to develop a large UG operation according to MRE, rock mechanics and projected stope productivity

**Trade-Off Studies:** material handling, tailings management, mobile equipment

**Capex:** Integrate existing infrastructure, approach by phase

**Opex:** Detailed evaluation, current (2025) costs; benchmarking against similar operations

# MARTINIERE GOLD PROJECT

## 2025 EXPLORATION FOCUS

## 15,000 m step-out exploration drilling

- Strike and down-plunge extensions to Dragonfly, Horsefly and Martiniere North
- Focused on defining broader geologic extensions to Martiniere gold system

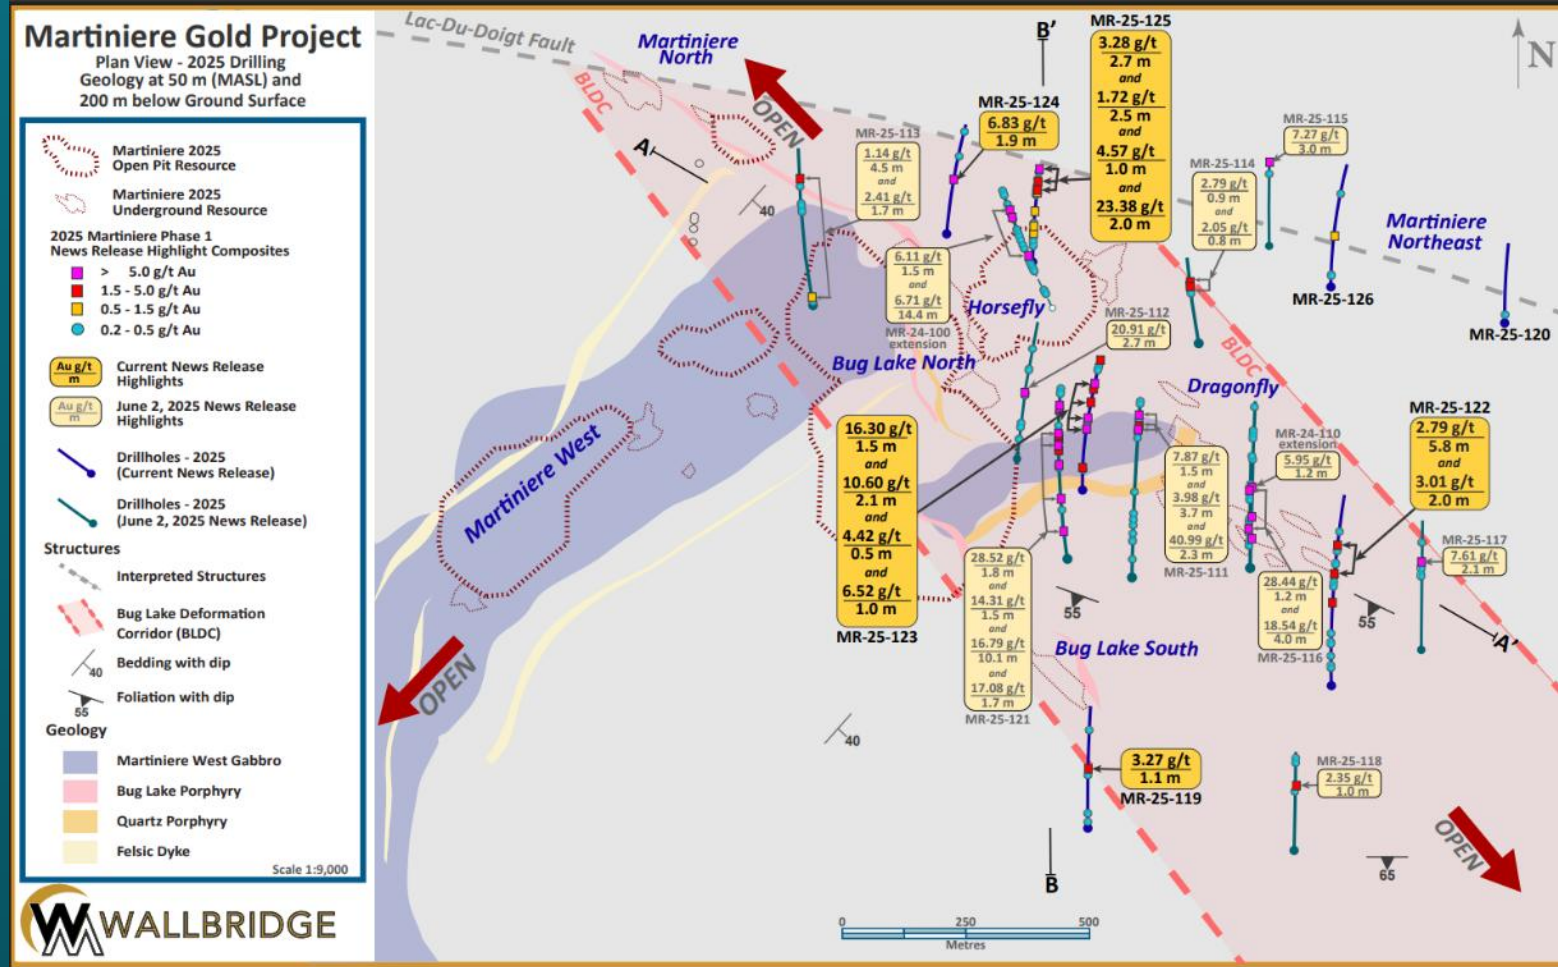

## 2025 OUTCOMES/PLANS

## Phase 1: Drilling Completed May 14

- 16 holes + 2 hole extensions, totaling 7,225 metres
- Multiple high-grade gold intercepts returned from 4 targets tested along Bug Lake Corridor, and a new unexplored area to the northeast of the Martiniere mineral resource

## Phase 2: Drilling Commenced July 16

- Exploring the broader mineralized gold system at Martiniere
- Targeting potential extensions to high-grade gold mineralization along the Dragonfly, Horsefly and Martiniere North zones, as well as the newly identified Martiniere Northeast target
- Generative reconnaissance fieldwork has commenced to identify earlier stage greenfields exploration targets along the Detour-Fenelon gold trend.

# WALLBRIDGE

## A Platform for Growth in the Abitibi

Advancing multi-million-ounce  
gold discoveries on a district-  
scale land package

### Fenelon: A Platform to Grow

Positive PEA Published March 2025, 16 Year Mine Life

### Growing Gold Resources

- Fenelon 2025 PEA: After-tax NPV<sub>5%</sub> of \$706 Million at US\$2,200 gold
- Martiniere – Mineralized footprint continues to expand, positive results from Phase 1 reported July 2 2025
- Phase 2 Drilling commenced July 16

### Strong Technical Team

Integrated exploration backed by a skilled team

### Premier Location

Established transportation, energy infrastructure and experienced workforce in one of the world's leading mining jurisdictions
