GOLD & SILVER

TSX-V: MACK | OTCQB: MKGSF

REAWAKENING THE COMSTOCK

ONE OF AMERICA'S RICHEST HISTORIC MINING DISTRICTS

OCTOBER 19, 2026

DISCLAIMER

No person should make any investment decision in relation Mackay Gold & Silver "Mackay," or the “Company”) based solely on this presentation. This presentation includes certain information that may constitute "forward-looking information." Forward-looking information includes, but is not limited to, statements about the estimation, future operations, results, prospects, anticipated financial, and operational results, capital expenditures and objectives, and the completion and timing of estimates.

Forward-looking information is necessarily based upon a number of estimates and assumptions that, while considered reasonable, are subject to known and unknown risks, uncertainties, and other factors, which may cause the actual results and future events to differ materially from those expressed or implied by such forward-looking information. There can be no assurance that such information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on forward-looking information.

All forward-looking information contained in this presentation is given as of the date hereof and is based on the opinions and estimates of management and information available to management as at the date hereof. The Company disclaims any intention or obligation to update or revise any forward-looking information, whether as a result of new information, future events, or otherwise, except as required by law. Except for statutory liability which cannot be excluded, each of Mackay, its officers, employees, and advisers expressly disclaims any responsibility for the accuracy or completeness of the material contained in this presentation and excludes all liability whatsoever (including in negligence) for any loss or damage which may be suffered by any person as a consequence of any information in this presentation or any error or omission therein.

Mackay accept no responsibility to update any person regarding any inaccuracy, omission, or change in information in this presentation, or any other information made available to a person, nor any obligation to furnish the person with any further information.

Darwin Green, P.Geo, CEO, and a qualified person (“QP”) as defined by Canadian National Instrument 43-101, has reviewed and approved the technical information contained in this presentation.

THE OPPORTUNITY

WORLD-CLASS DISTRICT

One of the world's great epithermal gold-silver systems

8.2 Moz Au & 192 Moz Ag historical production

SIZE OF THE PRIZE

Target >5Moz

Multiple targets, Initial focus on the parallel, historically under-explored, Occidental/ Brunswick lode

STRONG MANAGEMENT

Proven mine finders with deep experience and knowledge of Nevada

LARGE TREASURY

Fully financed to carry-out large drill programs across multiple targets over the next 24-months and beyond

CAPITAL STRUCTURE

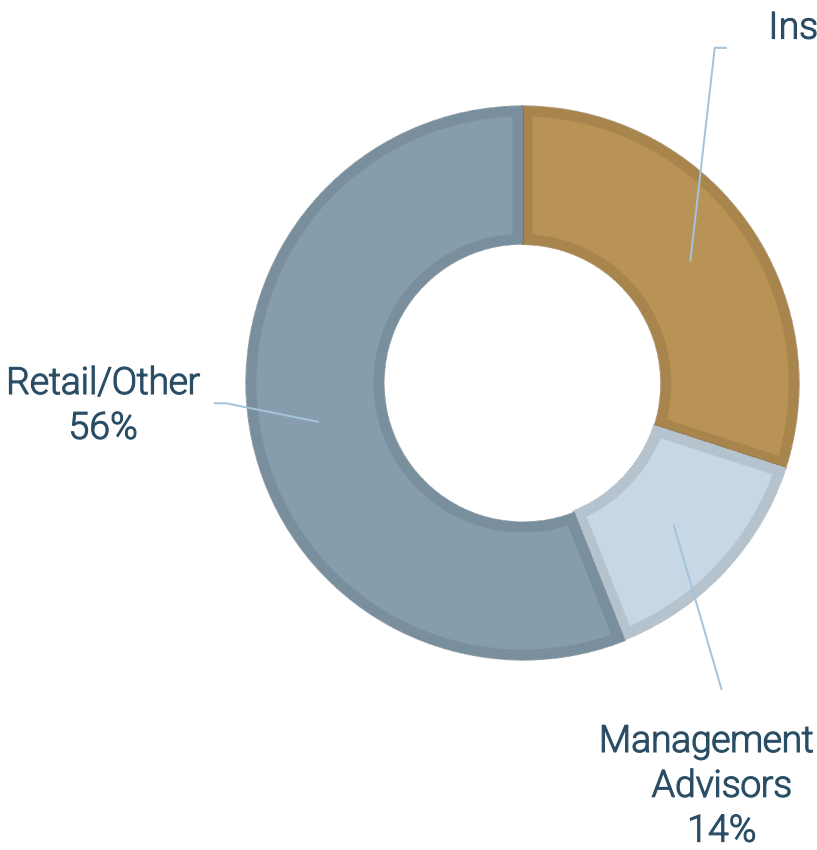

Commenced trading April 24, 2026

Capitalization and Balance Sheet	
Shares I&O	**87.7 M**
Options[1]	5.7 M
RSUs	2.1 M
Warrants[2]	0.3 M
Shares Fully Diluted	95.5 M
Cash	**US$38 M** C$53 M
Market Capitalization (@ US $2.12/share) *As of October 15, 2026*	US$187 M C$264 M

1. Stock options prices at USD $0.50 and USD $1.40
2. Warrants priced at USD $2.00
3. Cash position updated following the close of Comstock Inc. acquisition (US $20M)

US $60.2 million raised at US $1.40/share in Mackay's go-public financing

last major UG operations

PRESENT

modern district consolidation

FRAGMENTED CLAIM PARCELS A BARRIER TO MODERN EXPLORATION – UNTIL NOW

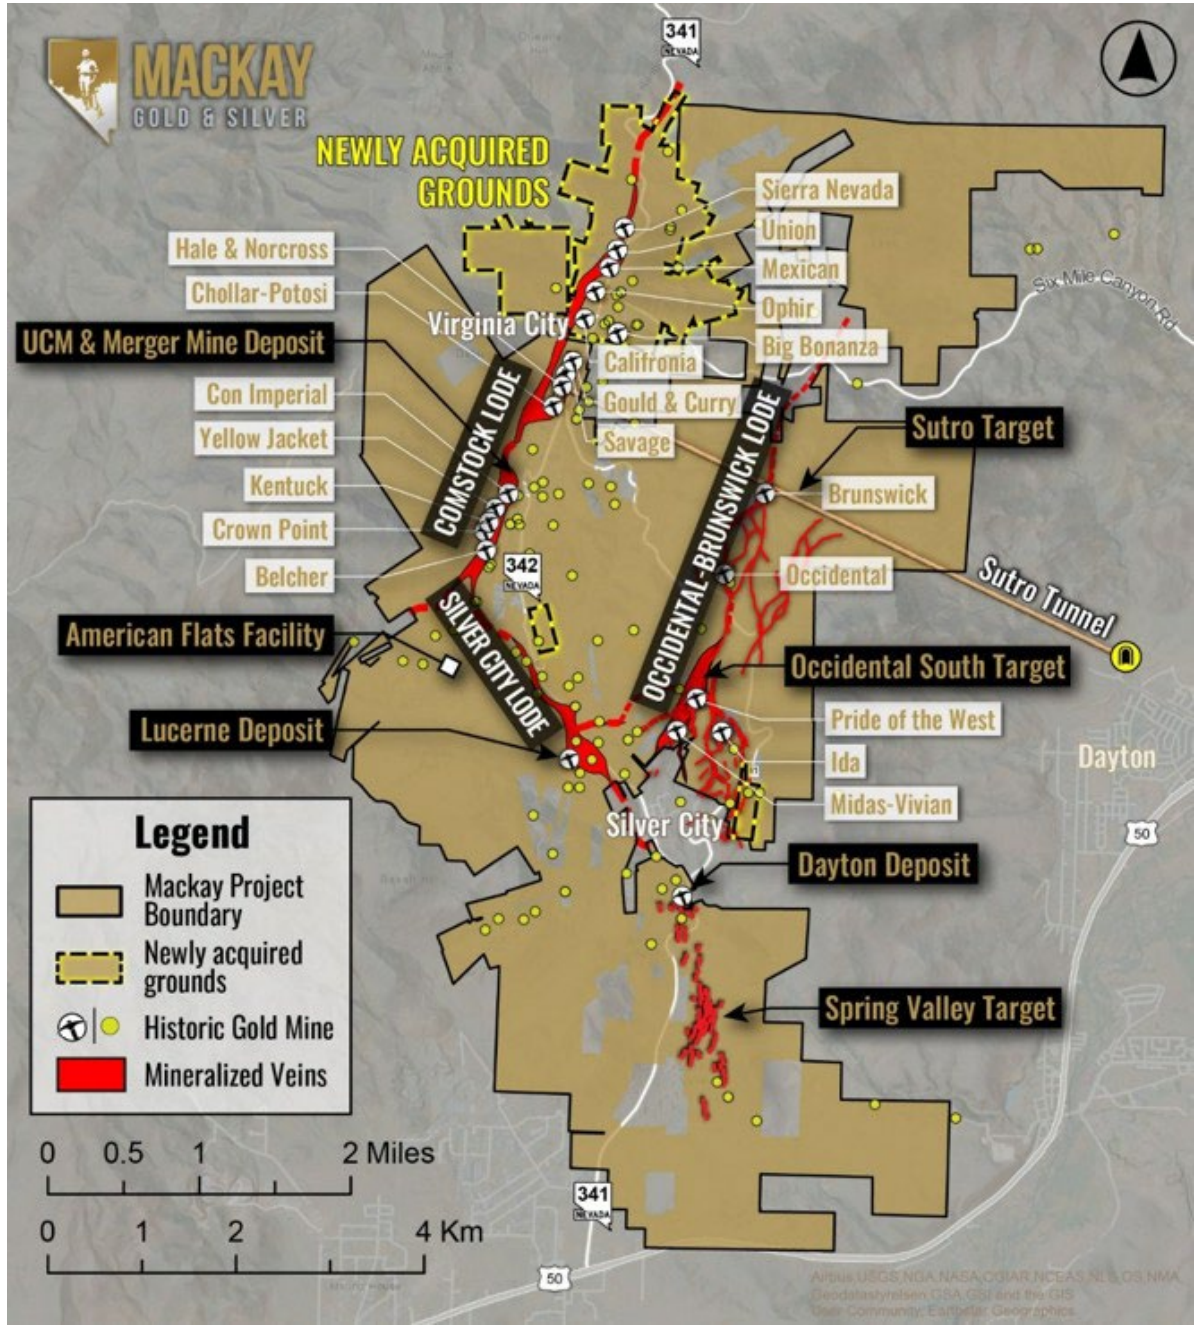

1878 era claim map of Comstock District

AN ICONIC DISTRICT – ALL UNDER ONE ROOF

CONSOLIDATION KEY TO UNLOCKING MODERN EXPLORATION OF THE COMSTOCK DISTRICT

- Many companies own a district-scale property, there are few that own an actual District
- Mackay controls all major historical mines within the District – a first in the Comstock District's 167-year history
- District was historically fragmented into many small mining properties held by separate owners which was a barrier to modern exploration – consolidation by Mackay into a single contiguous 47.5 km^2 land package has removed that barrier
- Exceptionally underexplored – a large portion of the major vein structures have seen little to no prior drilling

* Newly acquired ground denotes properties included in the most recent acquisition agreement (announced Sept 10, 2026), which is pending close. Current land package was rapidly assembled over an 18-month period via multiple acquisitions from both private owners and public entities as well as staking of available open ground.

WHAT WE OWN

16.5KM OF EPITHERMAL VEINS (LODES)

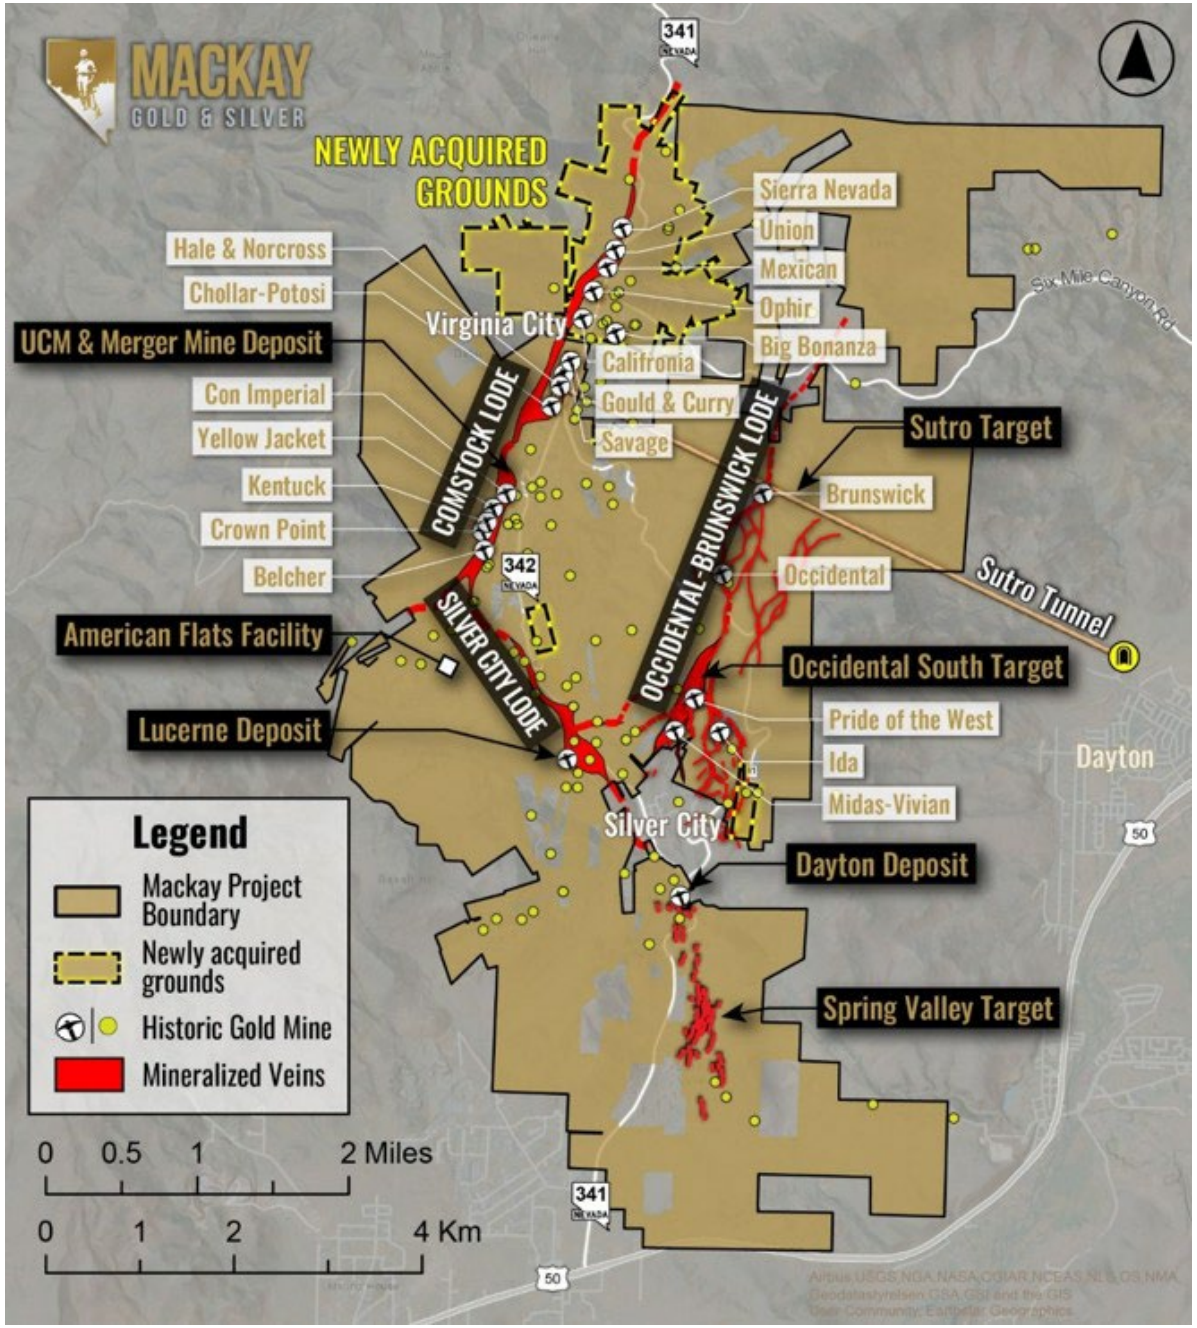

- Comstock Lode (6km)
- Occidental-Brunswick Lode (4.5km)
- Silver City Lode (6km)

~2MOZ IN HISTORICAL ESTIMATES[1]

- Lucerne & Dayton gold deposits (605koz M&I + 297koz Inf)
- UCM & Merger Mine deposit (~1Moz at 5 g/t AuEq[2], 1920's era)

PERMITTED HEAP LEACH FACILITY

- Crushing circuit, leach pad, and Merrill Crowe facility
- Operated from 2012 to 2016, currently on care and maintenance

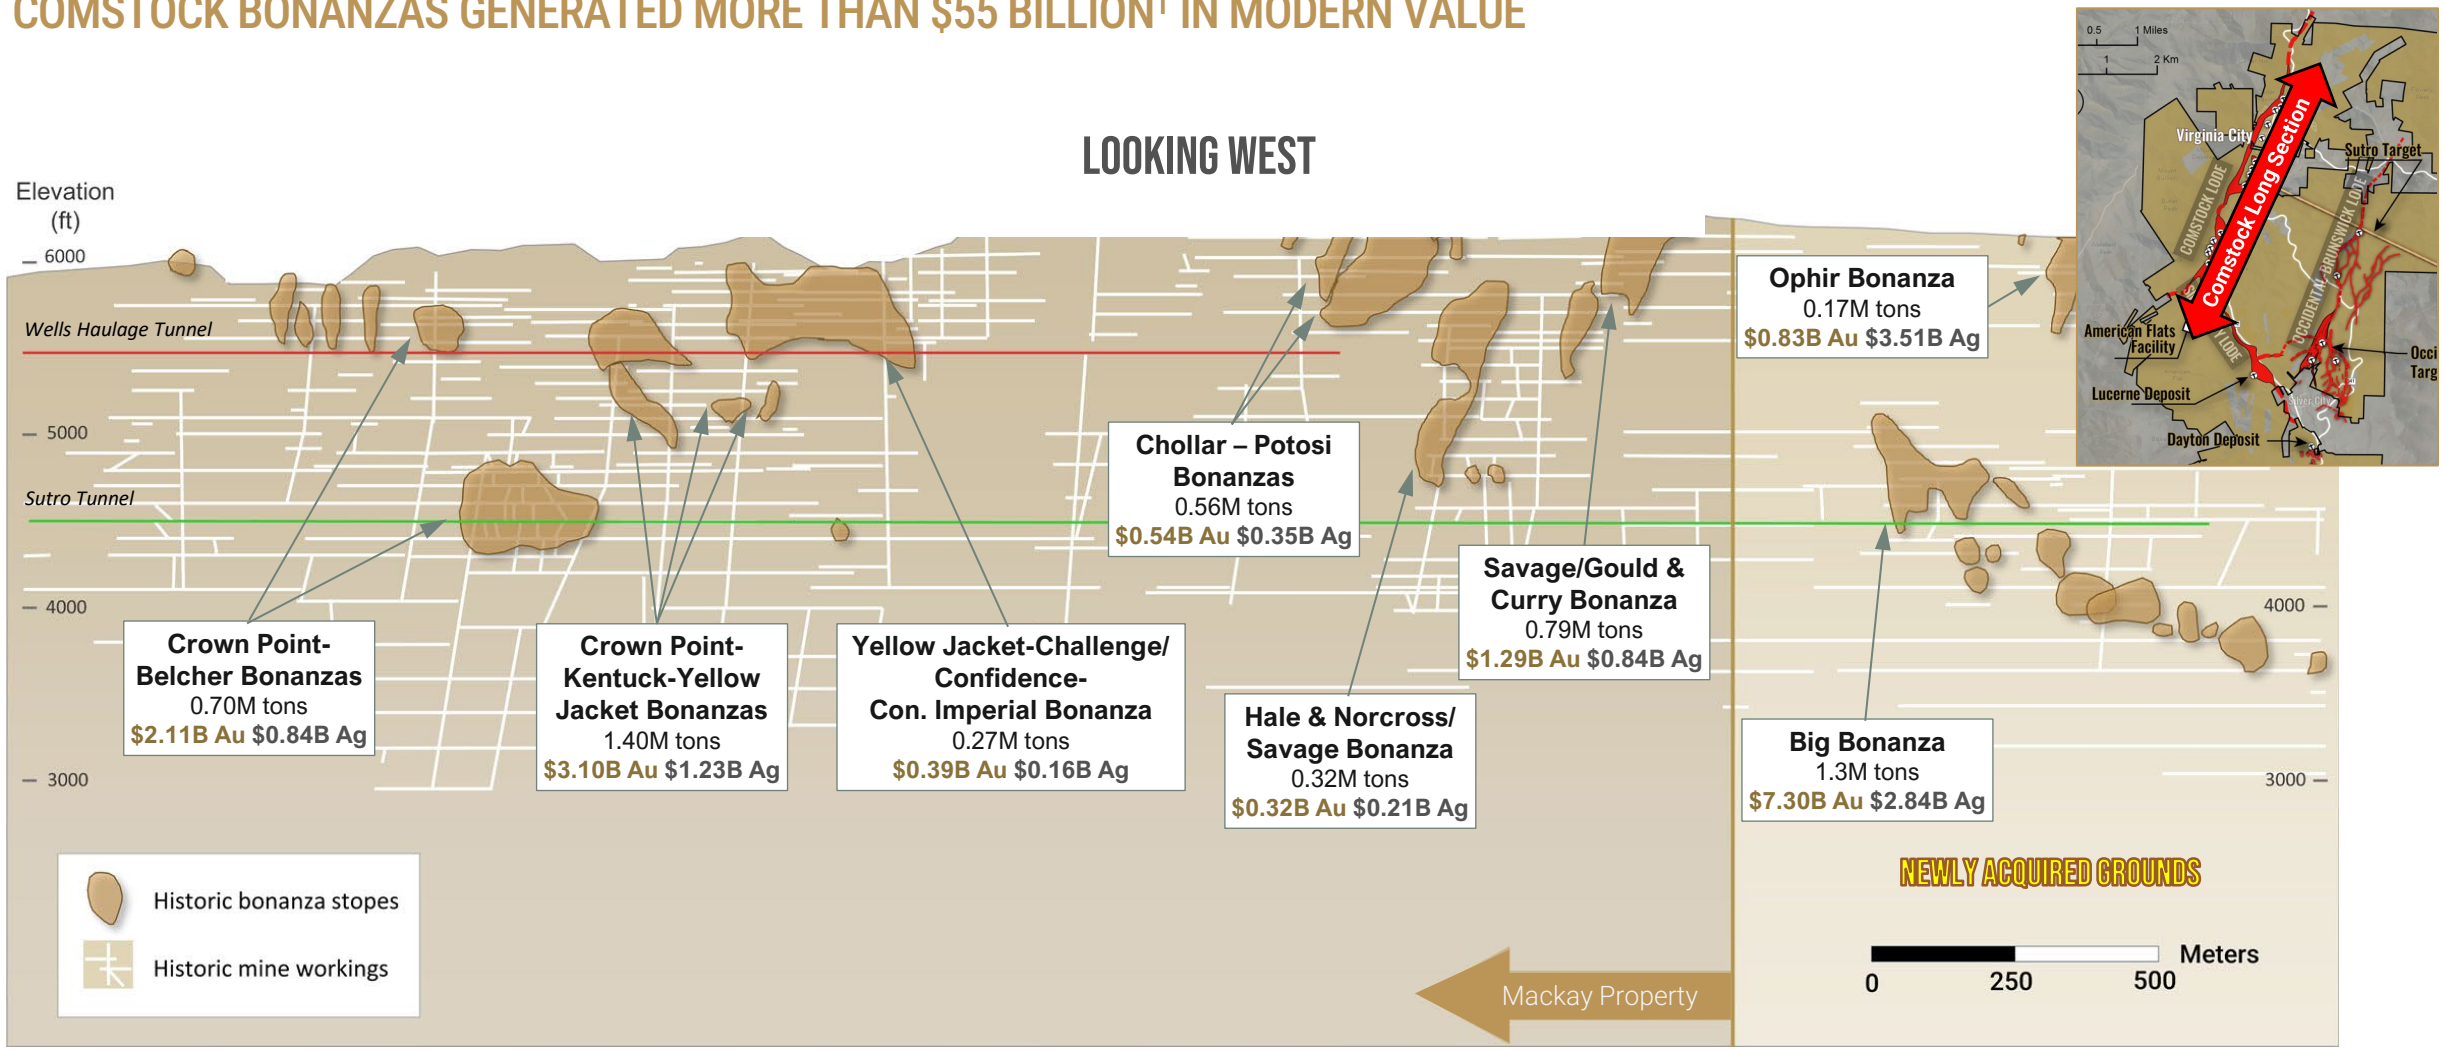

1. Resource estimates are historical in nature and are treated as historical estimates under National Instrument 43-101. Historical estimates do not comply with the Canadian Institute of Mining, Metallurgy, and Petroleum (CIM) Standards on Mineral Resources and Reserves Definitions and Guidelines and is reported here to provide historical context only. Lucerne and Dayton historical estimates as reported in SK1300 reports dated March and December 2022. 2. The UCM & Merger Mine estimate is from 1920's era mining reserve , reported at an estimated recovered grade of 3.7g/t gold; 107g/t silver, (~5 g/t AuEq based on an 80:1 Ag:Au ratio).

AN ECONOMIC POWERHOUSE

Longitudinal section showing the Comstock Lode's bonanza deposits

COMSTOCK BONANZAS GENERATED MORE THAN $55 BILLION[1] IN MODERN VALUE

[1]Assumes metal prices of $4,000/oz Au, and $50/oz Ag . Source 1882 production as detailed by Bonham, 1969,: Geology and Mineral Deposits of Washoe and Storey Counties, Nevada,, Nevada Bureau of Mines Bulletin70, 140 pages

EXPLORATION STRATEGY

Path to building a multi-million-ounce resource base

1 OCCIDENTAL SOUTH – HIGH-GRADE SHALLOW OXIDE

- Shallow, high-grade oxide Au-Ag zone
- Proof of concept – first drill holes returned 59.4 m at 1.00 g/t Au, 47.2 m at 1.15 g/t Au, 48.8 m at 0.97 g/t Au, open in all directions
- Early-stage discovery, goal to drill out 1-2 Moz in 12-months

2 SUTRO TARGET – OCCIDENTAL-BRUNSWICK LODE

- High-grade underground vein target at depth on the Occidental
- >30m wide vein zone at ~450m depth cut by 1870's drainage tunnel
- No modern exploration, first ever drill testing now underway

3 LUCERNE AND DAYTON OXIDE DEPOSITS – SILVER CITY LODE

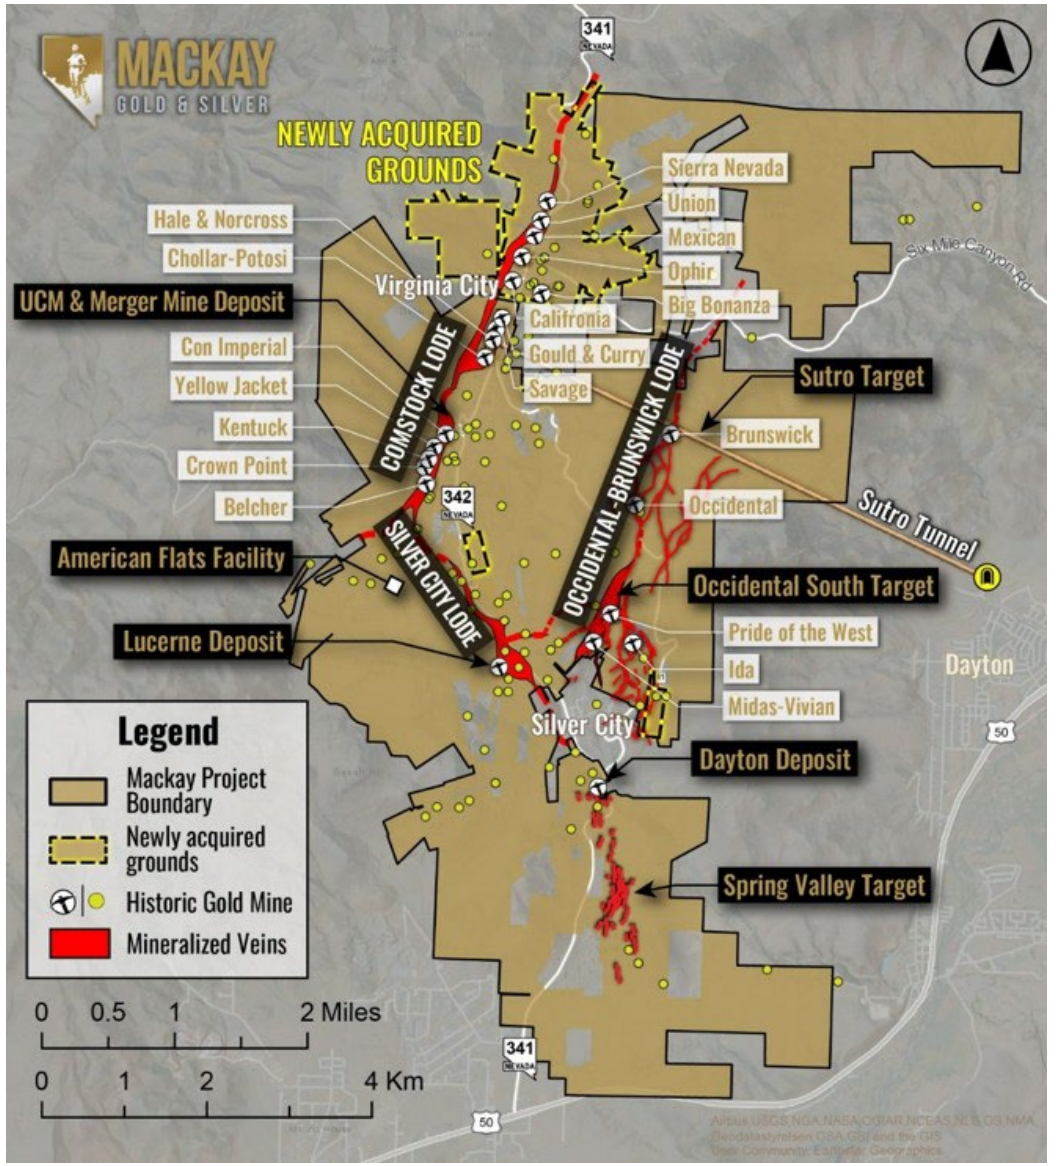

- Convert SK1300 historical estimates (2022) to NI43-101 resource
- Step-out drilling to define additional high-grade oxide mineralization

4 COMSTOCK LODE – UNDERGROUND

- Residual Historic 1920's era '*reserve*' of ~1Moz validates potential to define significant volume of residual ore (below 1890's cut-off grade)
- Compilation of historic data used to assist targeting

5 DISTRICT – UNDISCOVERED BONANZAS

- Development of a structural model to predict locations of undiscovered veins and bonanzas

2026 PHASE 1 DRILL PROGRAM - OCCIDENTAL

Systematic exploration of the Occidental-Brunswick Lode – fully funded to significantly expand scale

RC DRILLING AT OCCIDENTAL SOUTH

15,000 m: Underway (over 5000m complete)

Target: Shallow high-grade oxide gold mineralization. Step-outs along strike and at depth from mineralization

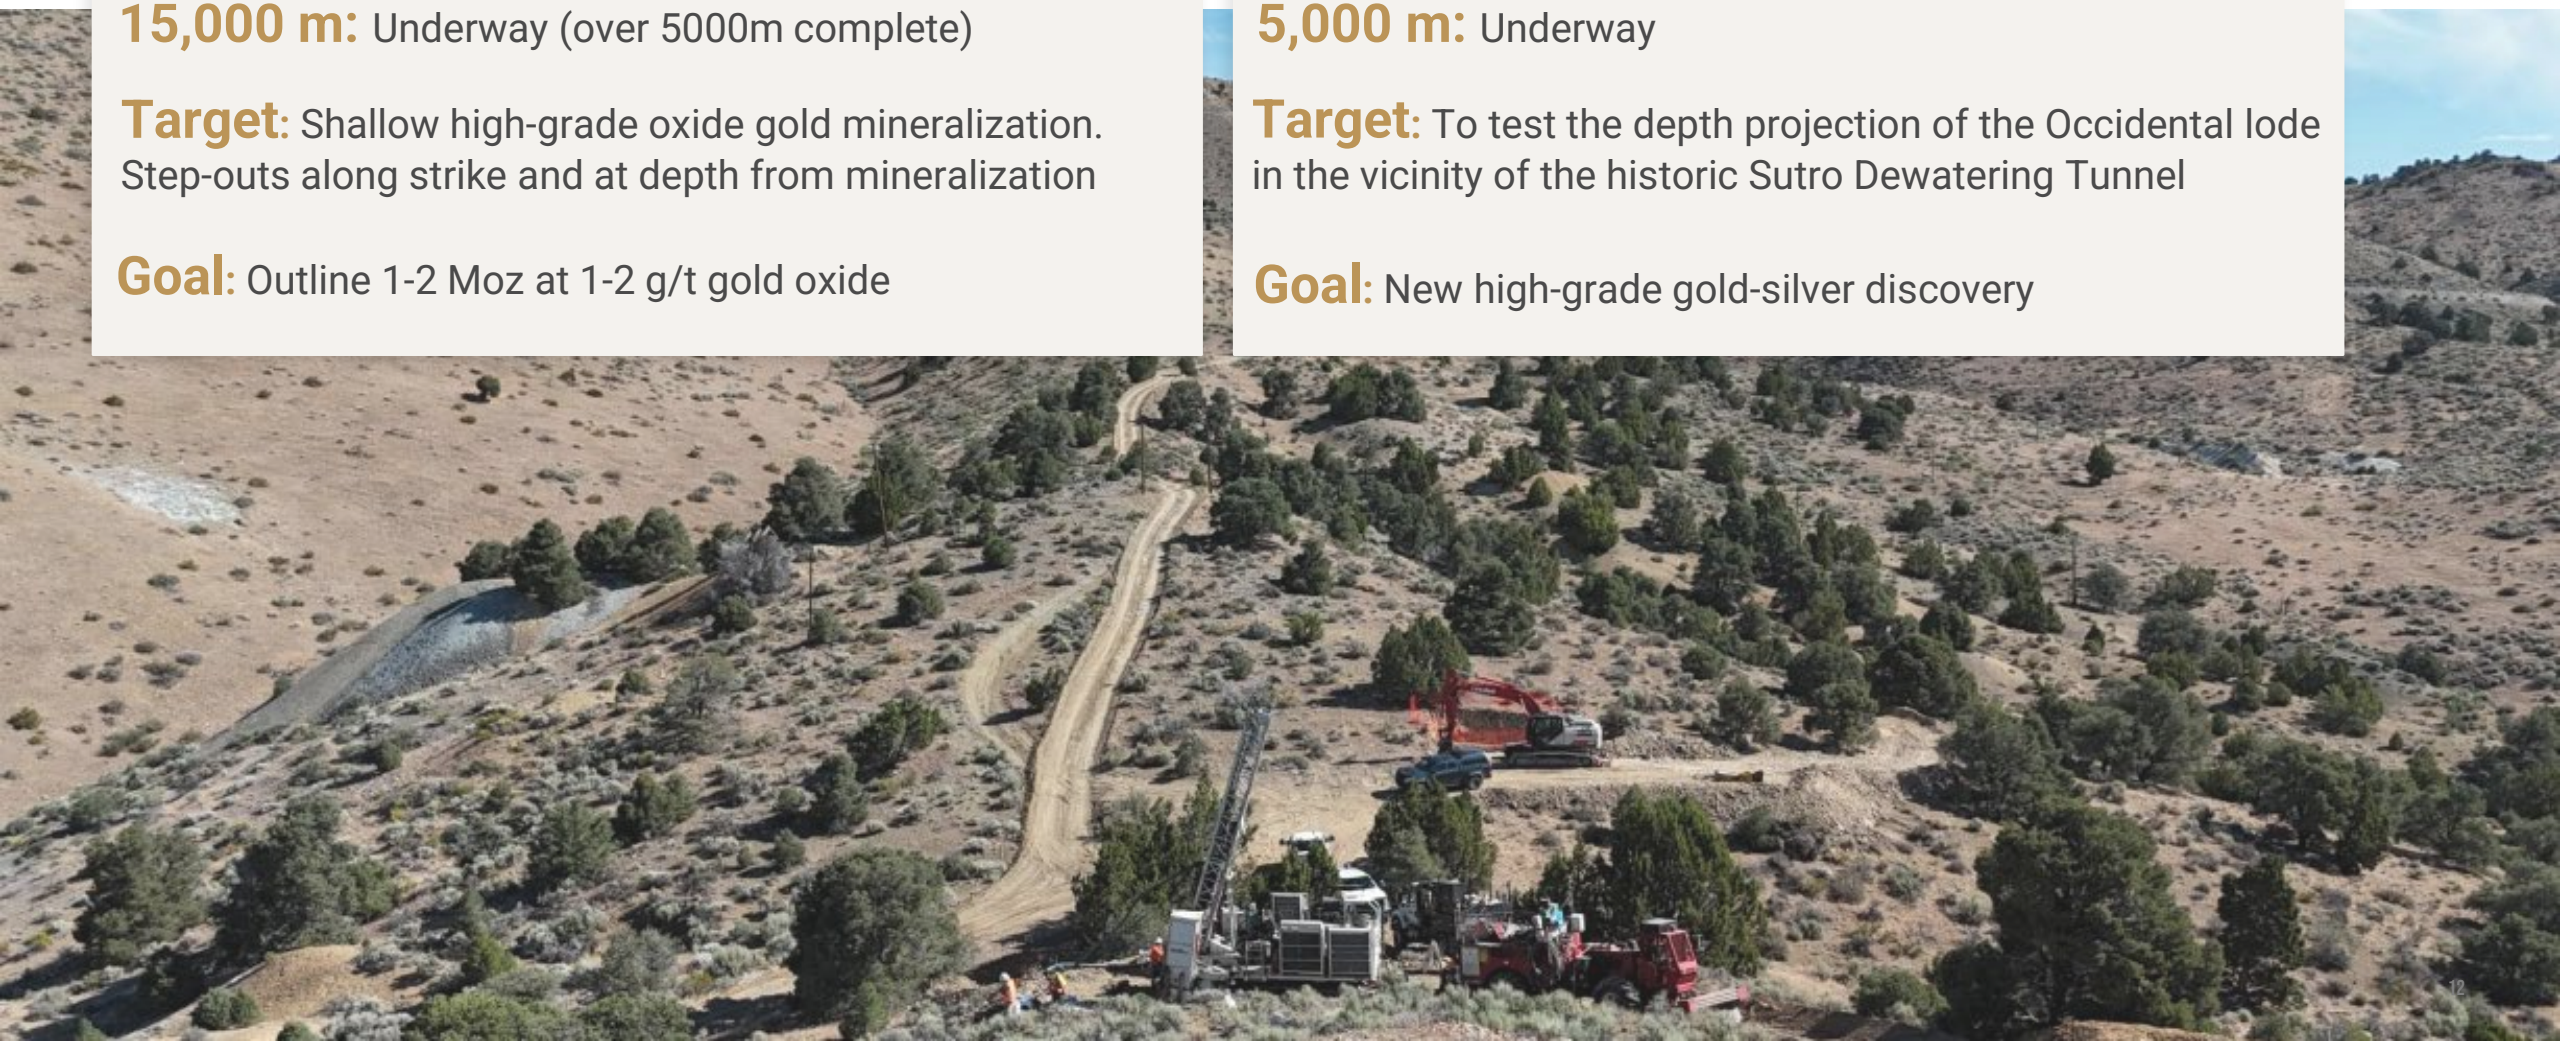

Goal: Outline 1-2 Moz at 1-2 g/t gold oxide

CORE DRILLING AT SUTRO TARGET

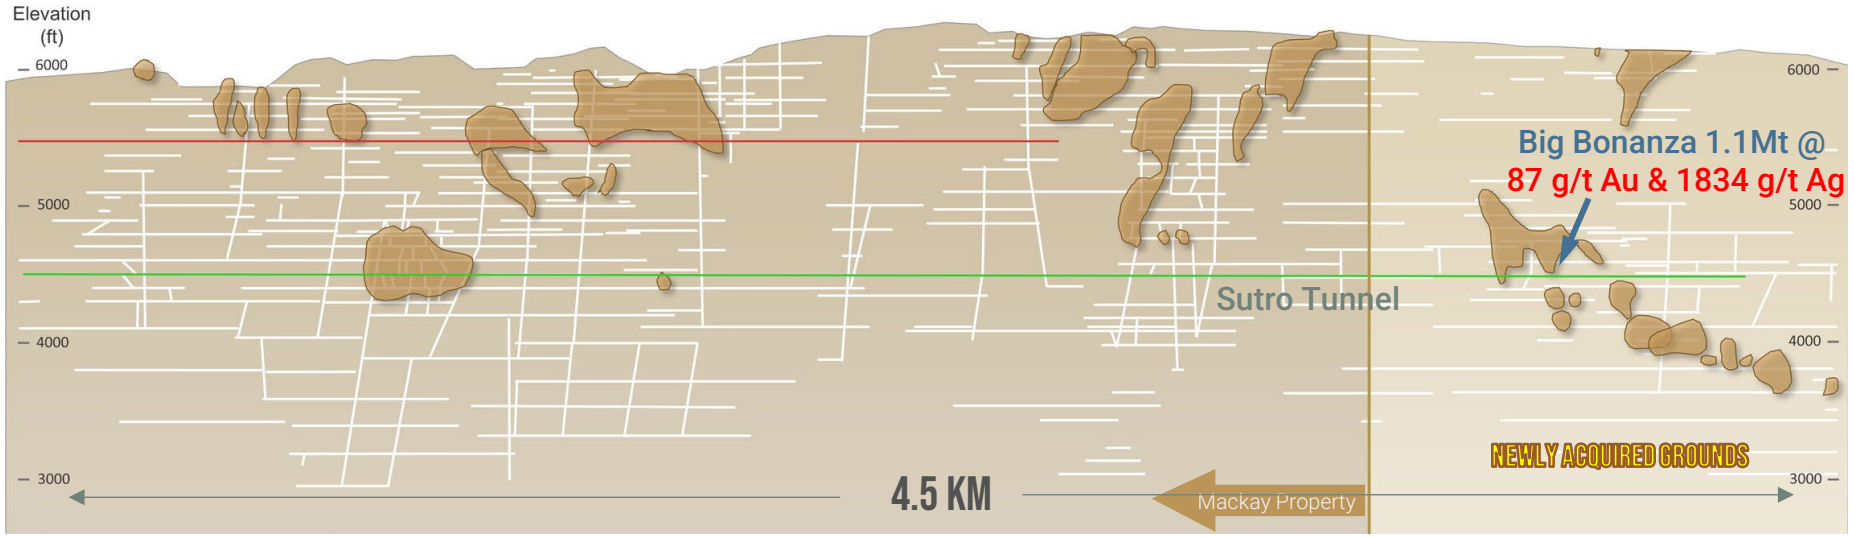

5,000 m: Underway

Target: To test the depth projection of the Occidental lode in the vicinity of the historic Sutro Dewatering Tunnel

Goal: New high-grade gold-silver discovery

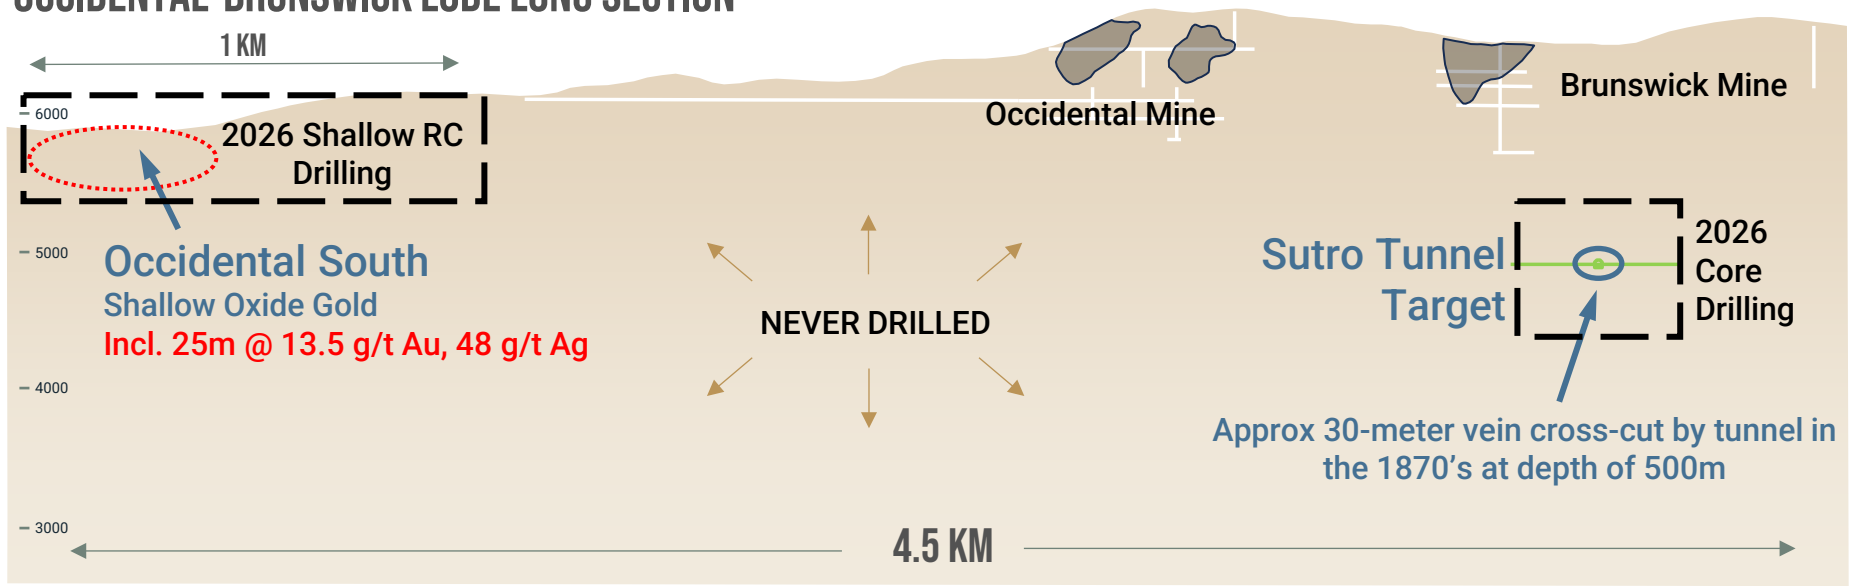

COMSTOCK LODE LONG SECTION – 8.2 MOZ AU @ 35 G/T AND 192 MOZ AG @ 726 G/T

8.2 MOZ AU
192 MOZ AG

OCCIDENTAL-BRUNSWICK LODE LONG SECTION –

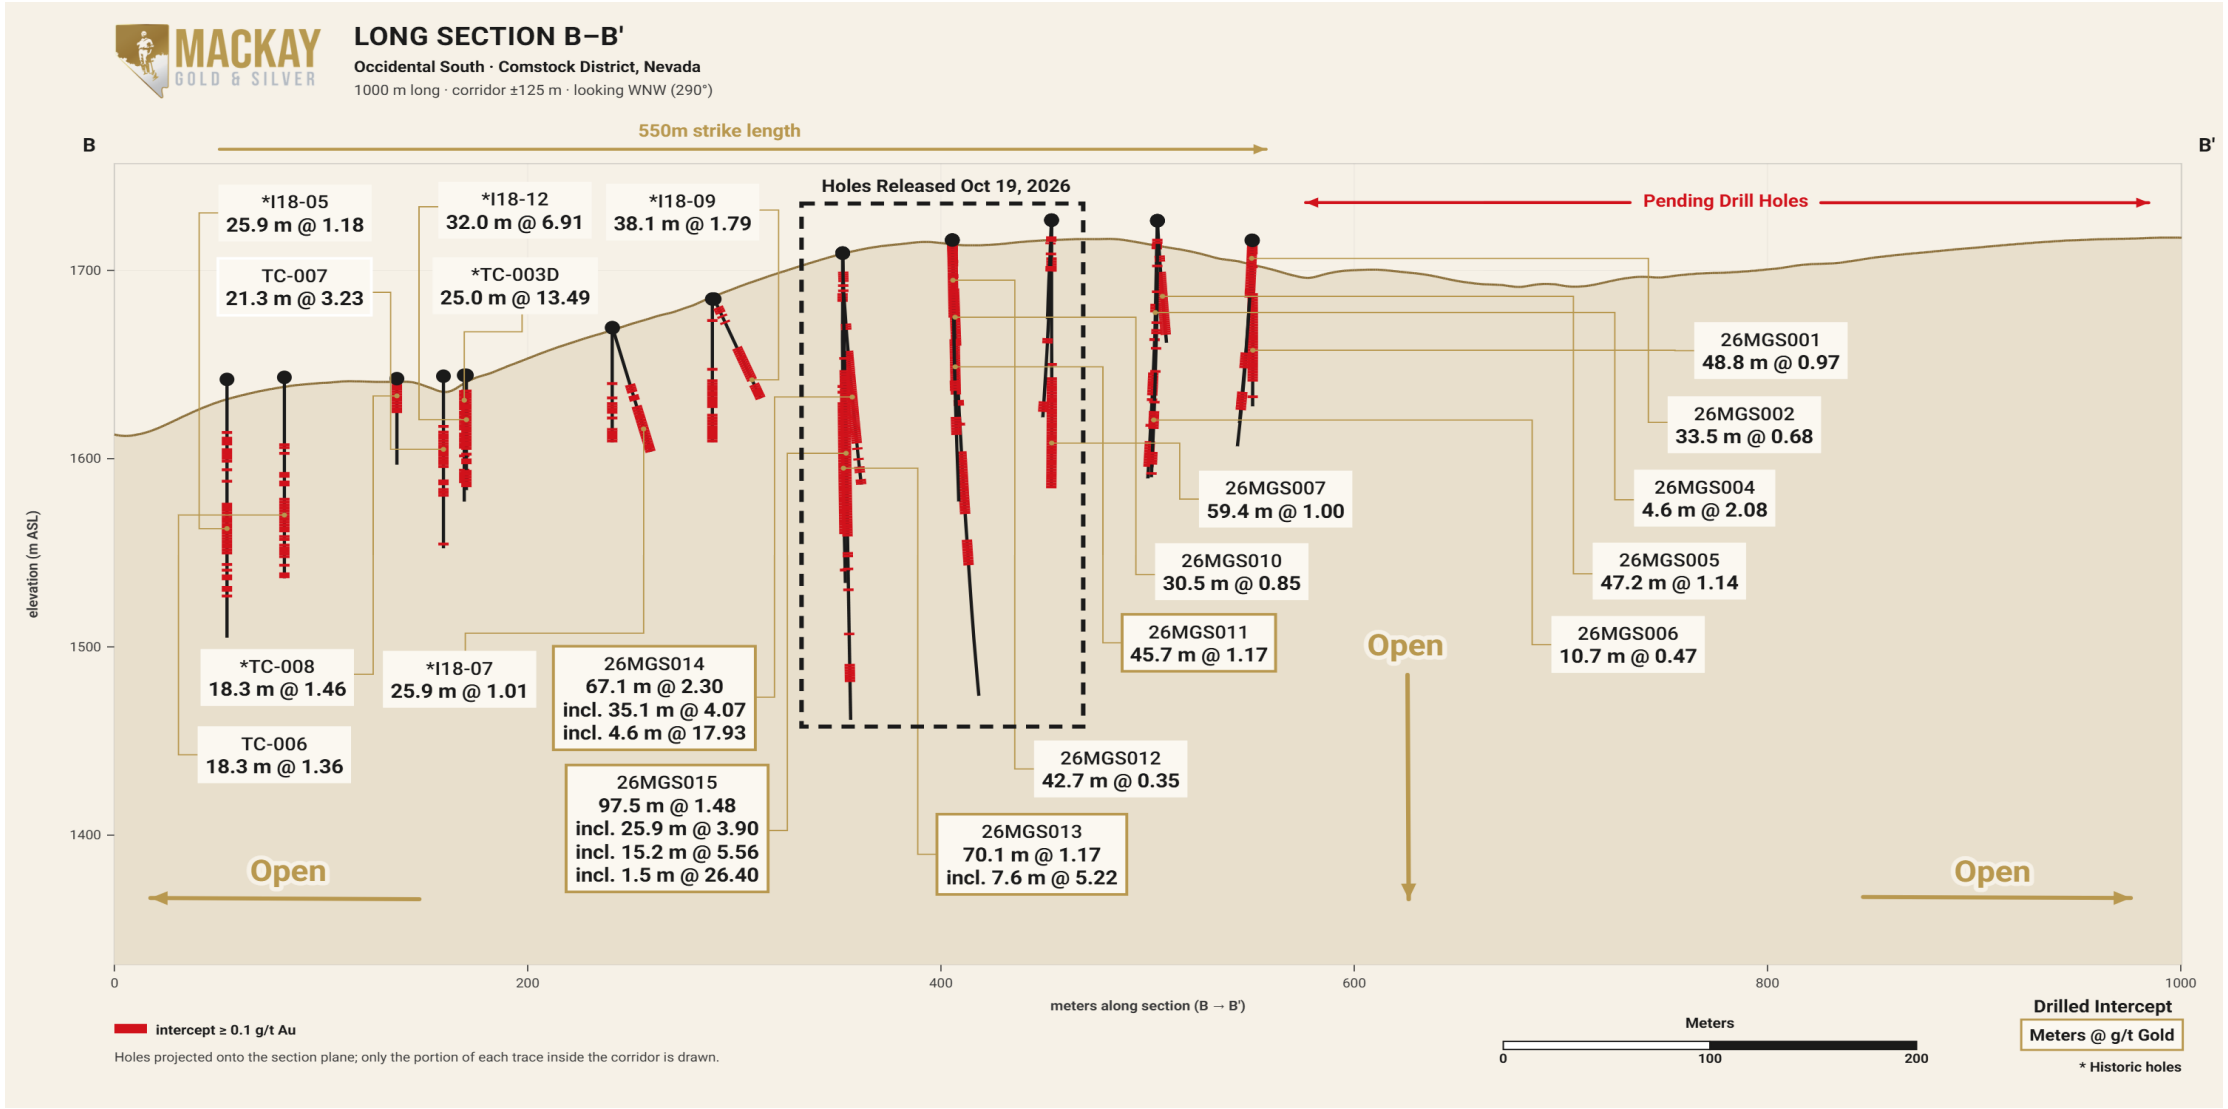

VIRTUALLY UNEXPLORED BELOW THE NEAR SURFACE

COMSTOCK LODE (TOP) A BLUEPRINT FOR OCCIDENTAL BRUNSWICK AT DEPTH

Longitudinal cross section for the Comstock Lode (top) and the parallel Occidental-Brunswick Lode (bottom)

OCCIDENTAL SOUTH – STRONG FIRST DRILL RESULTS

Continuous mineralization defined across 550 meters of strike length on nominal 50-meter spaced sections – open to expansion on all sides

Long section B–B' for Occidental South drill area, looking west northwest.

OCCIDENTAL SOUTH
LATEST DRILL RESULTS

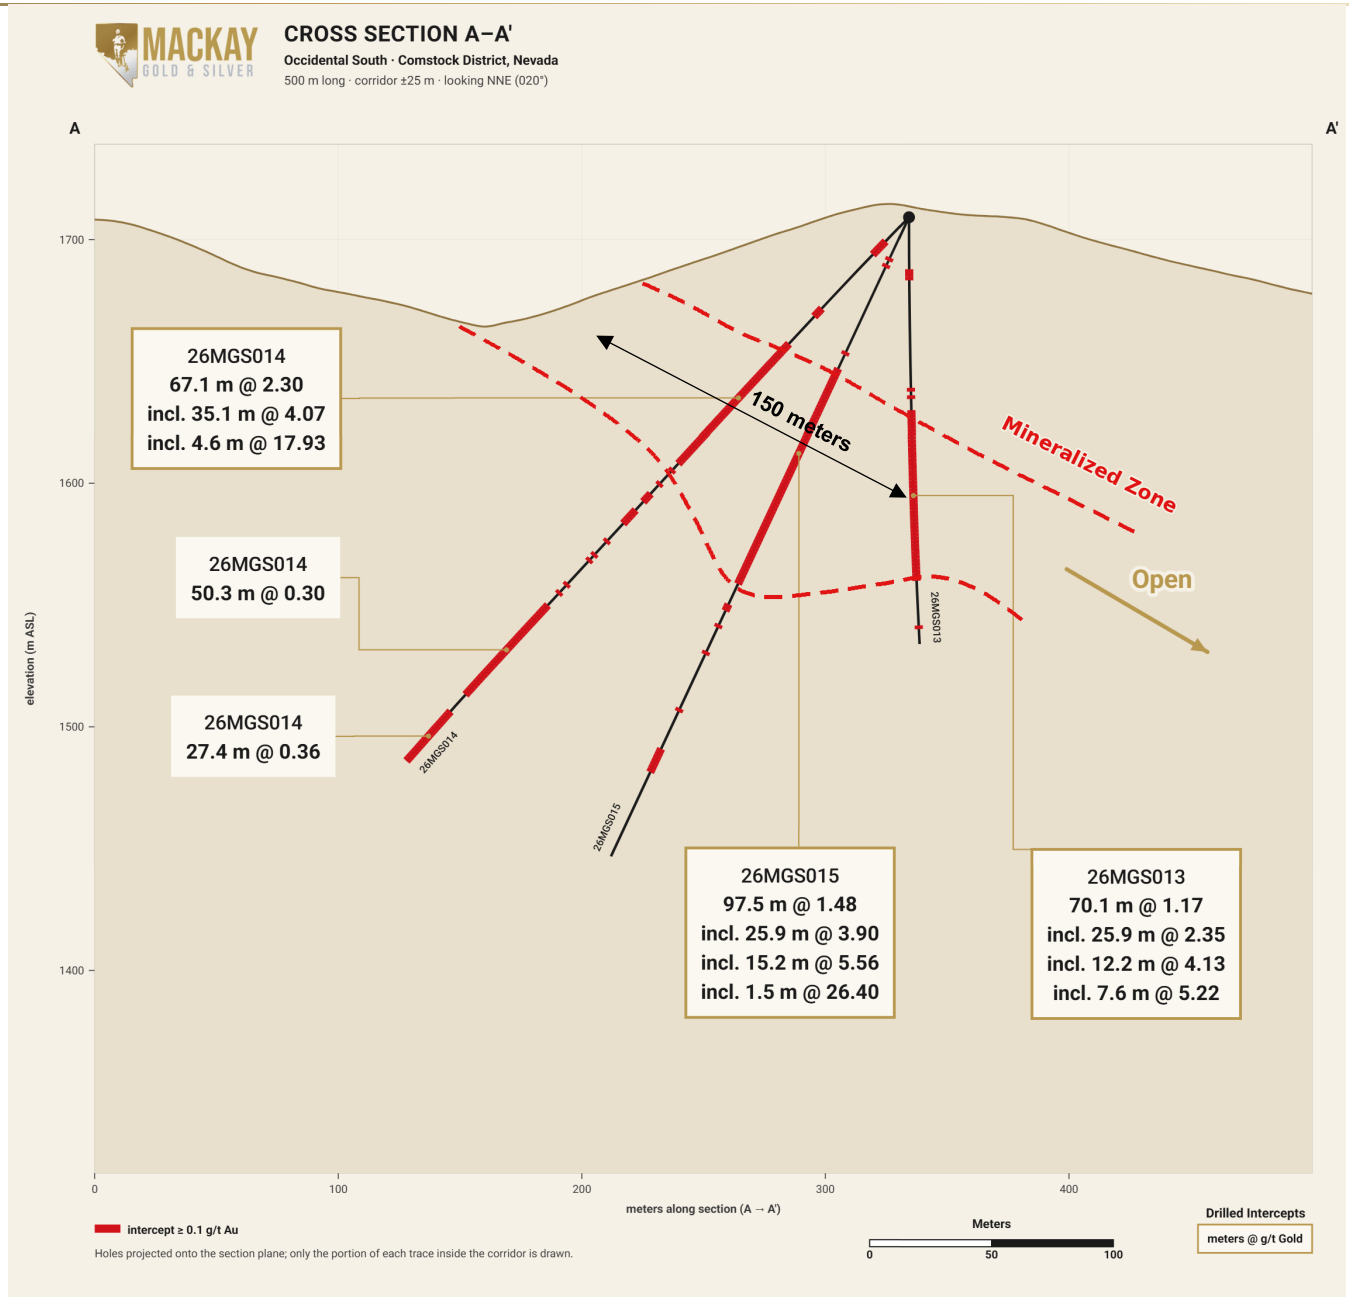

Grade, width, and continuity

THICK CONTINUOUS MINERALIZATION

- excellent continuity of thick, high-grade, near surface gold-silver mineralization
- multiple 50-100m true width intersections @ 1-2+ g/t
- extended 150-meters down dip to date
- rapidly taking shape as a coherent mineralized zone open on all sides to expansion

HIGH-GRADE SUB INTERVALS

- 17.93 g/t gold over 4.6 meters
- 5.56 g/t gold over 15.2 meters
- 5.22 g/t gold over 7.6 meters

Cross section A–A' for Occidental South drill area, looking north northeast.

OCCIDENTAL SOUTH – ZONE IS ASSOCIATED WITH STRONG GOLD-IN-SOILS

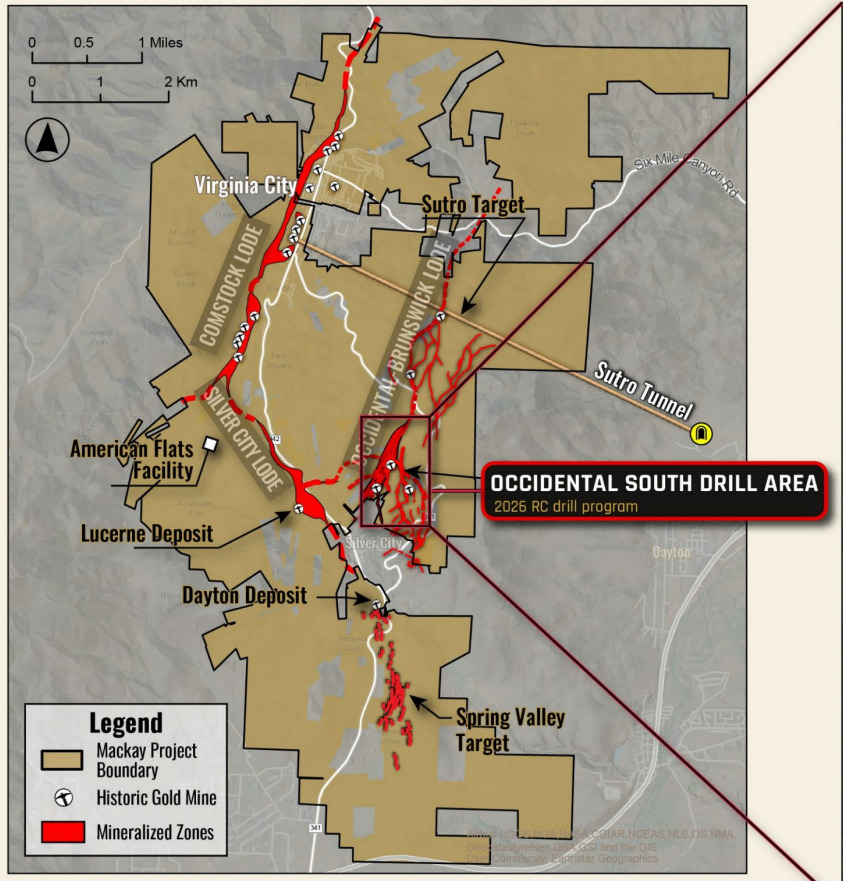

Initial 1000m x 400m Drill Target Area

OCCIDENTAL SOUTH DRILL PLAN

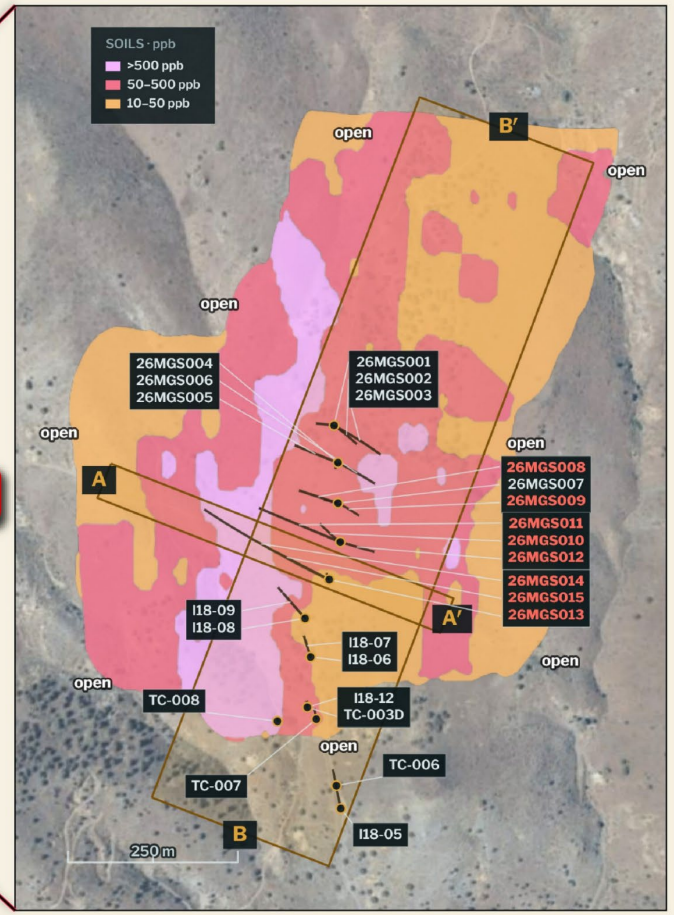

- Very strong gold-in-soil anomaly on trend of known mineralization; expansion of soil survey underway
- First drill results confirm excellent correlation between strong gold-in-soils and strong gold mineralization in bedrock
- Large, open-ended target area, with initial plan to test 1000m x 400m area
- Opportunity to rapidly drill out a near surface high-grade oxide gold system with plenty of room to grow

LUCERNE AND DAYTON DEPOSITS – OXIDE GOLD AND SILVER

Recently acquired gold-silver deposits defined by historical estimates (SK1300), open to expansion
Planning underway for bringing into compliance as resource estimates under NI43-101 includes potential confirmation and expansion drilling

Lucerne Deposit Historical Estimate

Category	Tons	Au Grade		Ag Grade		Contained Au	Contained Ag
		(oz/ton)	(gpt)	(oz/ton)	(gpt)	(ounces)	(ounces)
Indicated	14,118,000	0.022	0.75	0.27	9.25	312,000	3,760,000

Tons = US short tons
oz/ton = ounce per US short ton
gpt = gram per metric tonne

The Lucerne and Dayton Deposit resource estimates are historical in nature and are treated as historical estimates under National Instrument 43-101 – *Standards of Disclosure for Mineral Estimates* ("NI 43-101"). A Qualified Person (as defined in NI 43-101) has not done sufficient work to classify the historical estimate as current mineral resources or mineral reserves. Mackay is not treating the historical estimate as current mineral resources, and the historical estimate should not be relied upon. It is being shared strictly for informational purposes. The Company believes that the historical estimate is relevant to an appraisal of the merits of the property and forms a basis upon which to develop future exploration programs. While the historical estimate has not been independently verified by the Company, the public disclosure of the data and its preparation in accordance with S-K 1300 standards indicates that the historical estimate was prepared to a reasonably high standard.

The Lucerne estimate was prepared by Mine Development Associates ("MDA"), a division of RESPEC, in a technical report dated March 16, 2022. The estimated resource for the Lucerne Deposit is constrained within an open pit and reported at a cutoff grade of 0.005 ounces ("oz") gold ("Au") per ton. Pit design and cutoff grade are based on a gold price of $1,750/oz. The resource is based on data that includes 88,786 gold assays and 89,236 silver assays from a total of 477,099 feet of drilling (1,045 reverse circulation holes, 407 core holes, and 402 air track holes). Interpolation dominantly utilized inverse distance to the power of four (ID4). The Dayton Deposit resource estimate was prepared by Behre Dolbear in a technical report dated November 1, 2022. The estimated mineral resource is constrained within an open pit economic shell based on a gold price of $1,800 per ounce and reported at a cutoff grade of 0.007 oz gold per ton.

The estimates and technical reports for the Lucerne and Dayton deposits were prepared in accordance with the disclosure and reporting requirements of the United States Securities and Exchange Commission's mining rules under subpart 1300 and item 601 (96)(iii) of Regulation S-K. While S-K 1300 and CIM standards utilized under NI43-101 are similar, including use of the same resource classification scheme, potential differences exist.

COMSTOCK LODE – RESIDUAL 'LOW' GRADE MINERALIZATION

In the 1920s – 60 Years after mining began, companies returned to define ~1 Moz of residual "low grade" mineralization in the upper Comstock

5-6MT

Historical 1920's era *'reserve'* (geologic inventory)

~1 MOZ

estimated residual historical gold equivalent *'reserve'* *

5.0 G/T

recovered gold equivalent grade*

1922-1926

operation active

13,000

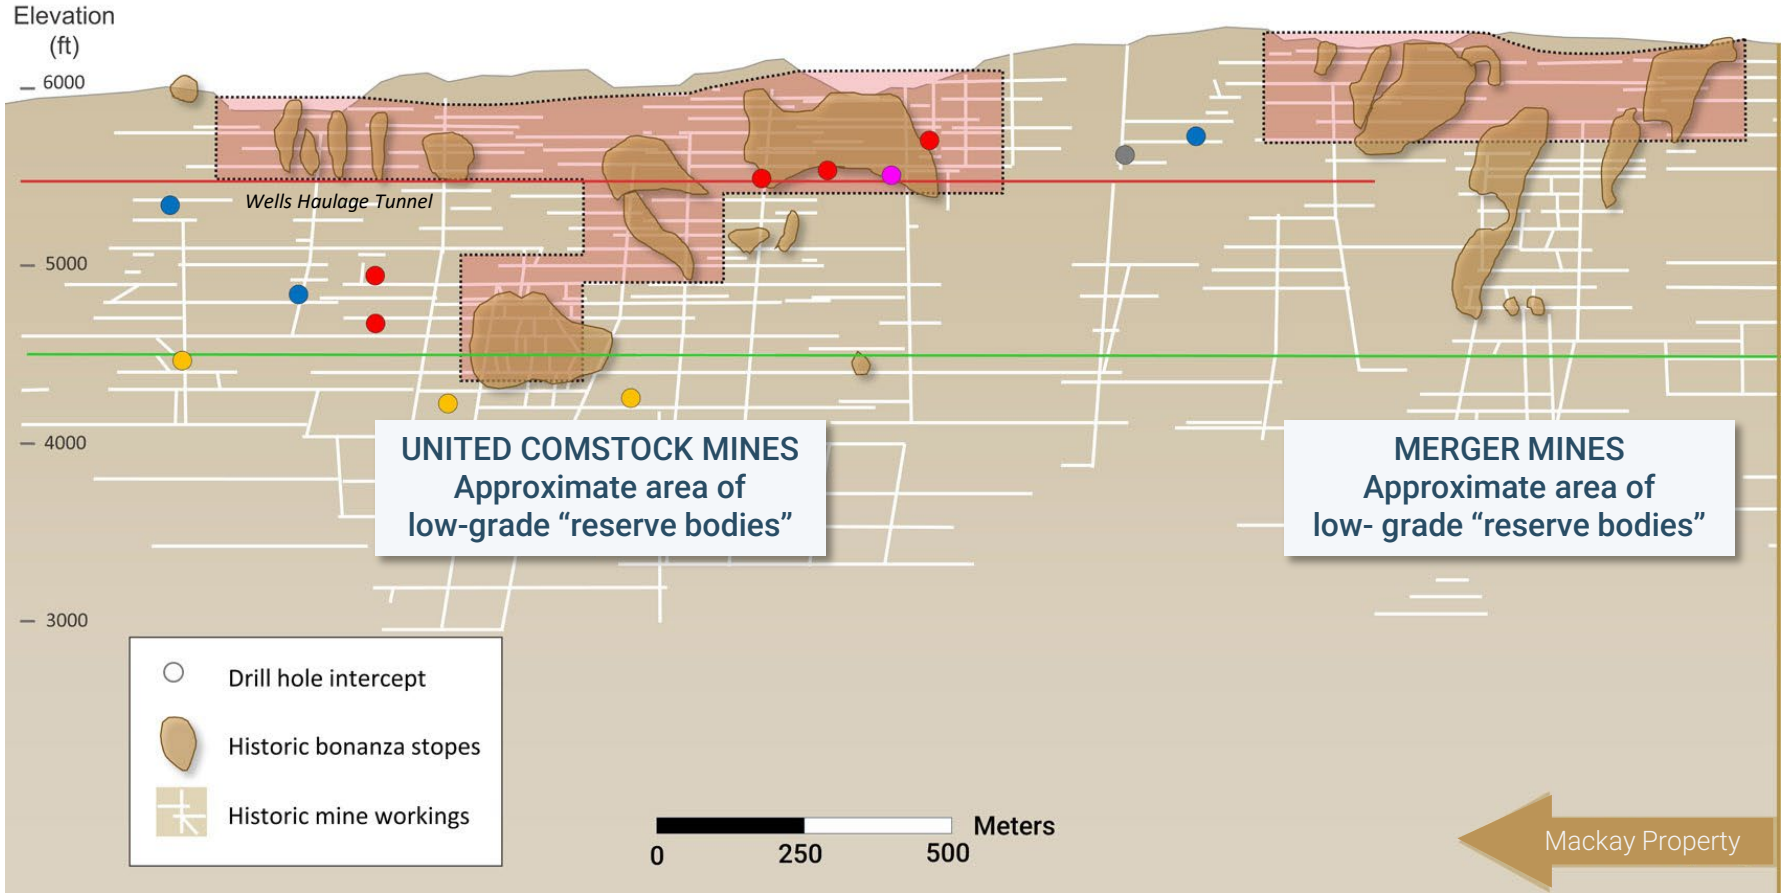

historical underground samples used to generate *'reserve'*

* Historical 'reserves' do not comply with the Canadian Institute of Mining, Metallurgy, and Petroleum (CIM) Standards on Mineral Resources and Reserves Definitions and Guidelines and is reported here to provide historical context only. * 3.7g/t gold; 107g/t silver; 80:1 Ag:Au ratio for gold equivalent calculation

COMSTOCK LODE – RESIDUAL 'LOW' GRADE MINERALIZATION

Strong evidence there is more to be found

UCM and Merger Mines' historical 1920's era "*reserve bodies*"[1] were defined by thousands of underground channel samples and meticulously documented on level plans and cross sections, which Mackay is incorporating into its 3D model of the district. Historical "reserve bodies" were only defined for ore that was in close proximity to the Wells haulage tunnel.

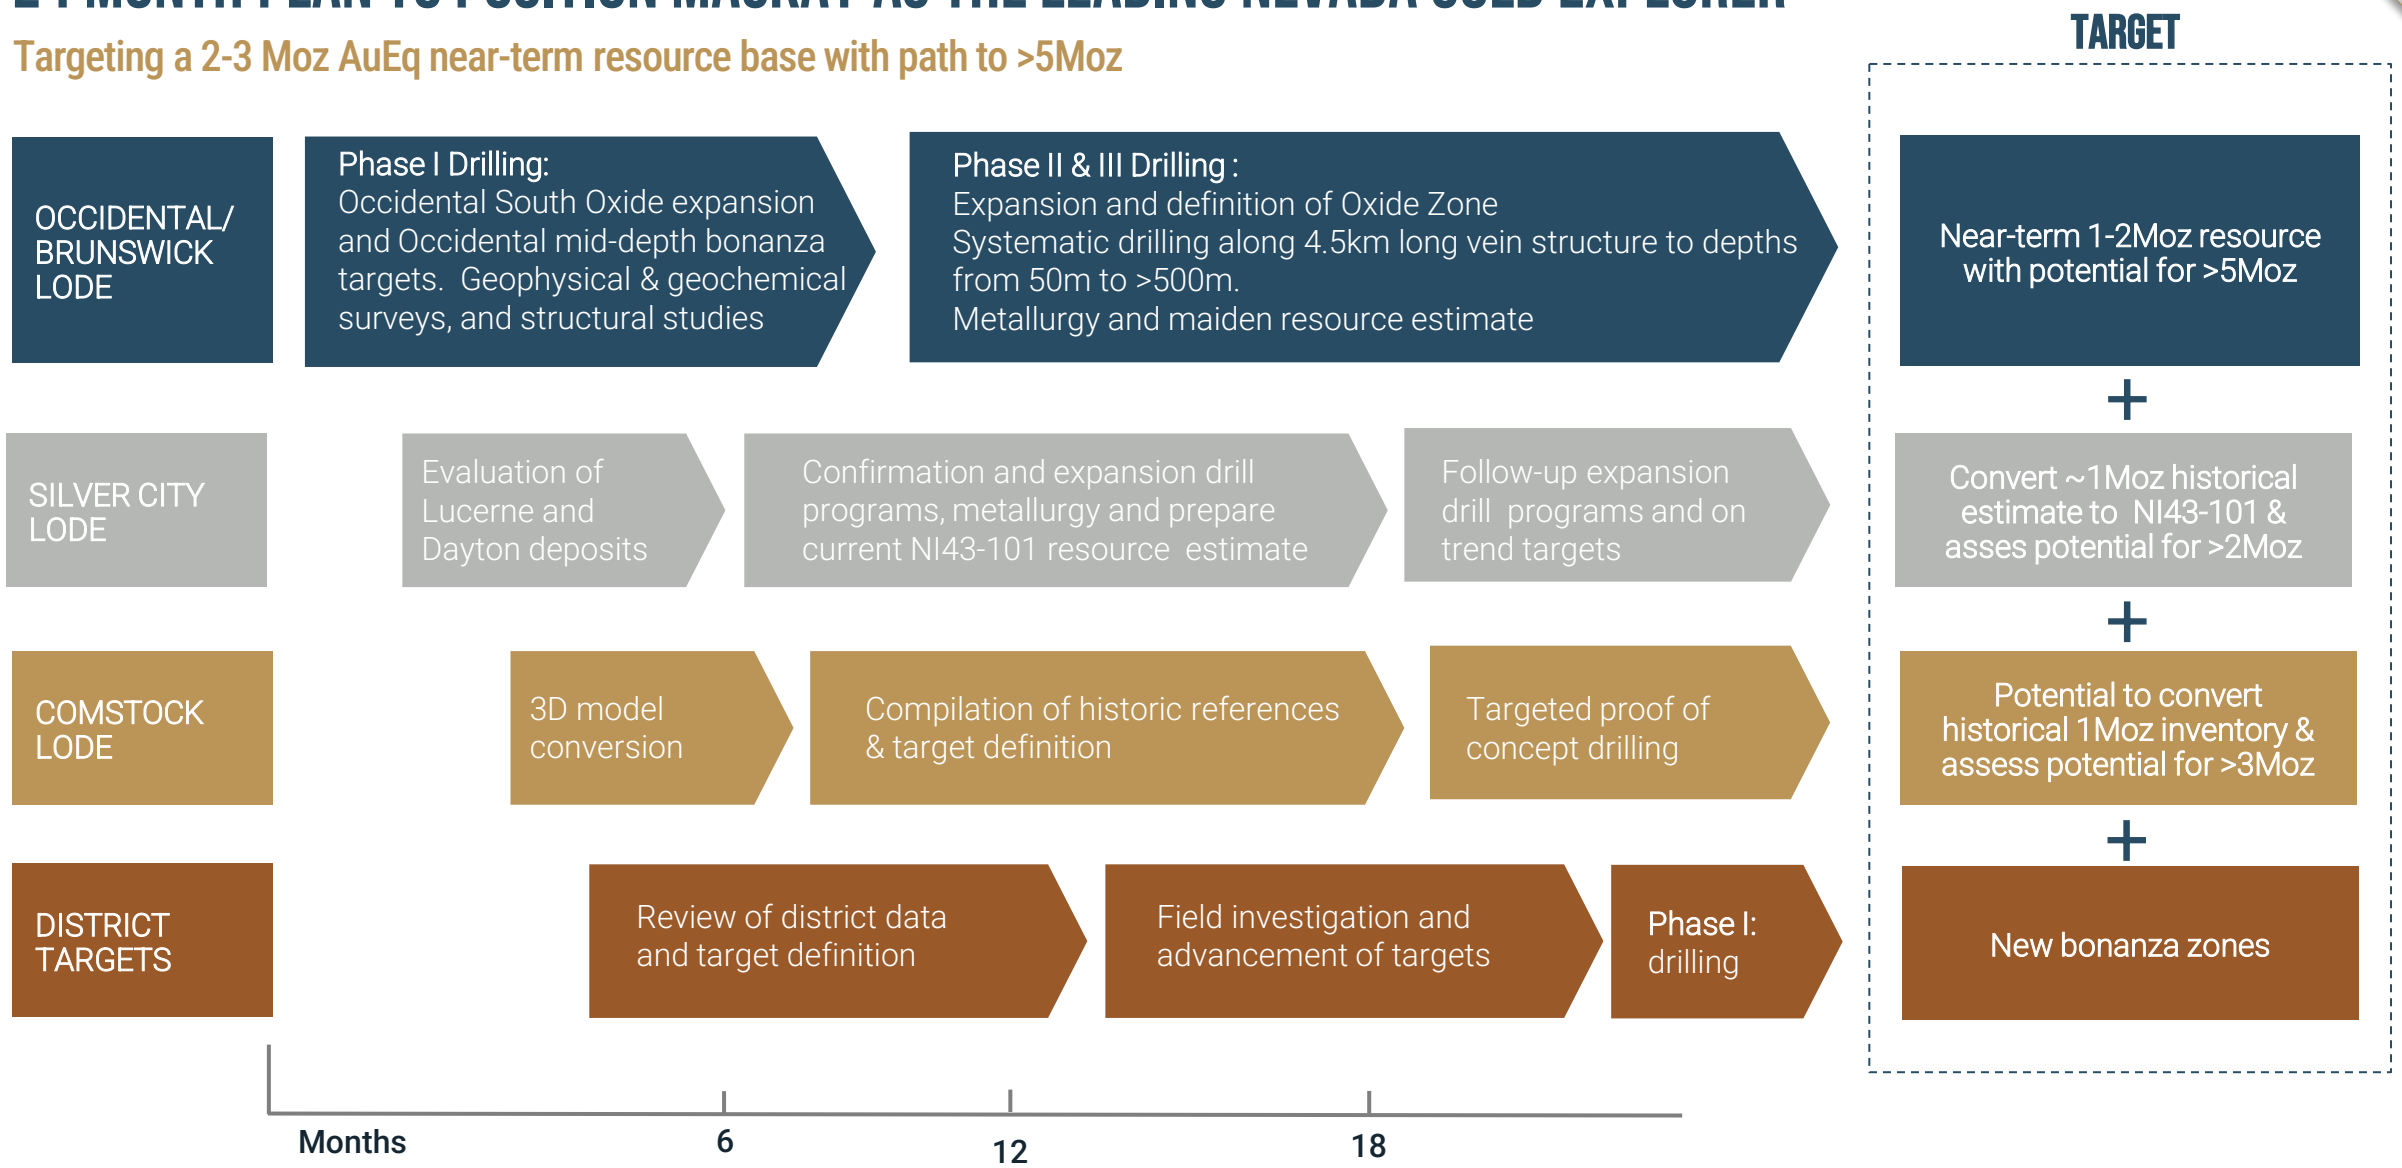

The 1925 issue of *Mineral Resources of the United States* reported the combined '*reserve*' tonnage defined by UCM and Merger Mines as 8.5Mt

Speculative potential for 2x to 5x the size of the 1920's '*reserve*' of comparable 'low-grade' residual mineralization at deeper levels

1. *Historical 'reserves' do not comply with the Canadian Institute of Mining, Metallurgy, and Petroleum (CIM) Standards on Mineral Resources and Reserves Definitions and Guidelines and is reported here to provide historical context only*

24 MONTH PLAN TO POSITION MACKAY AS THE LEADING NEVADA GOLD EXPLORER

Targeting a 2-3 Moz AuEq near-term resource base with path to >5Moz

MACKAY
GOLD & SILVER

ONE OF THE LAST GREAT AMERICAN GOLD SILVER DISTRICTS TO SEE MODERN EXPLORATION

NEW DISCOVERY UNDERWAY AT OCCIDENTAL SOUTH

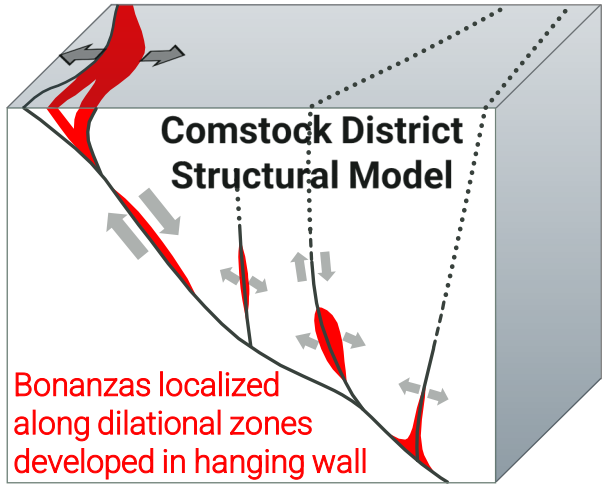

LAND CONSOLIDATION KEY TO UNLOCKING THE DISTRICT

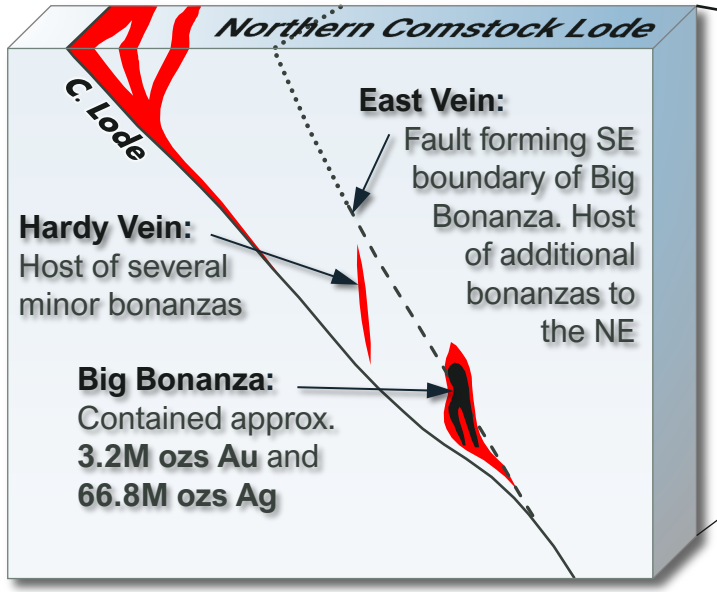

STRONG BALANCE SHEET USD$38M

TSX-V: MACK | OTCQB: MKGSF

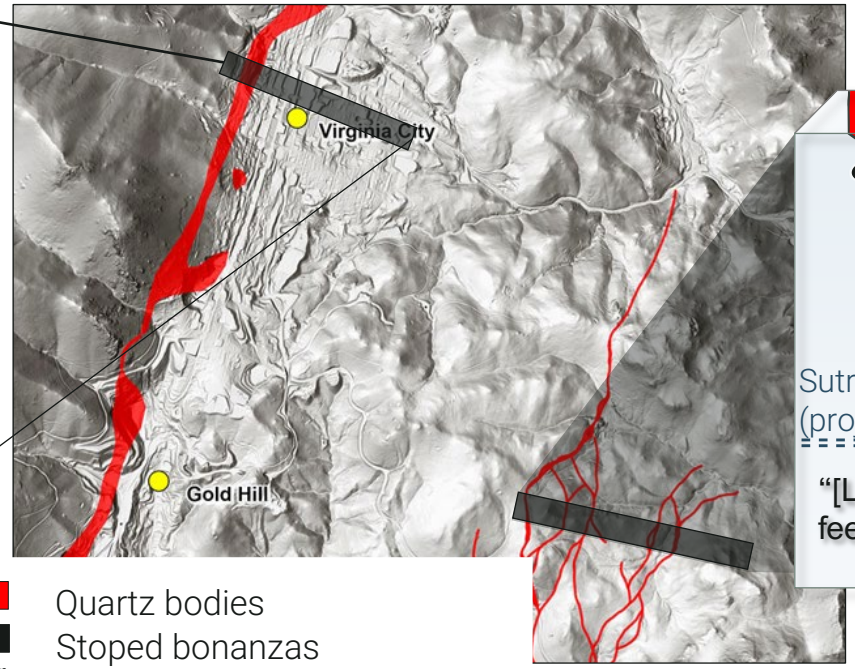

APPENDIX – STRUCTURAL MODEL AND DISTRICT UNDISCOVERED BONANZAS

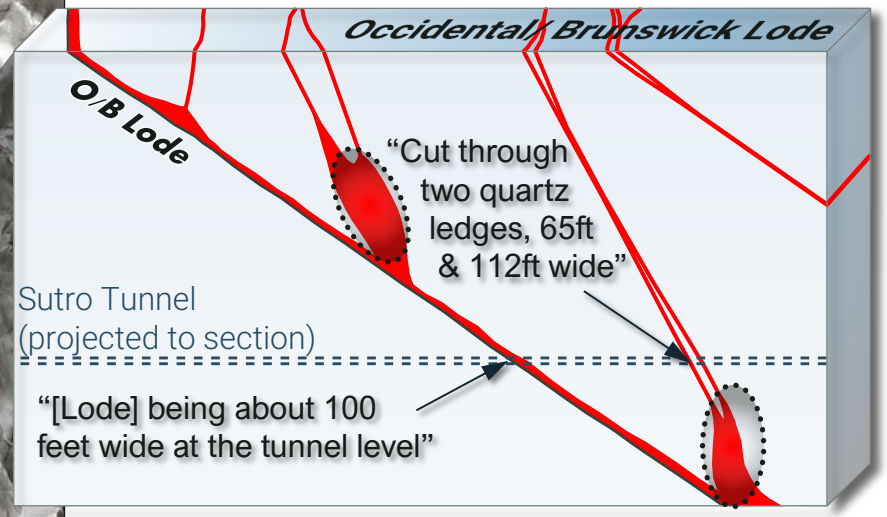

- Characteristics of the known bonanzas are the blueprint for locating additional bonanzas
- Steeper angle, hanging wall veins and faults have the potential to control bonanzas proximal to the low angle lodes
- Target by:
  - Compiling historic mine and level reports in 3D model
  - Develop structural model to predict locations of undiscovered bonanzas
  - Conduct proof of concept drilling once target confidence is achieved

Sections modified from Becker, 1882

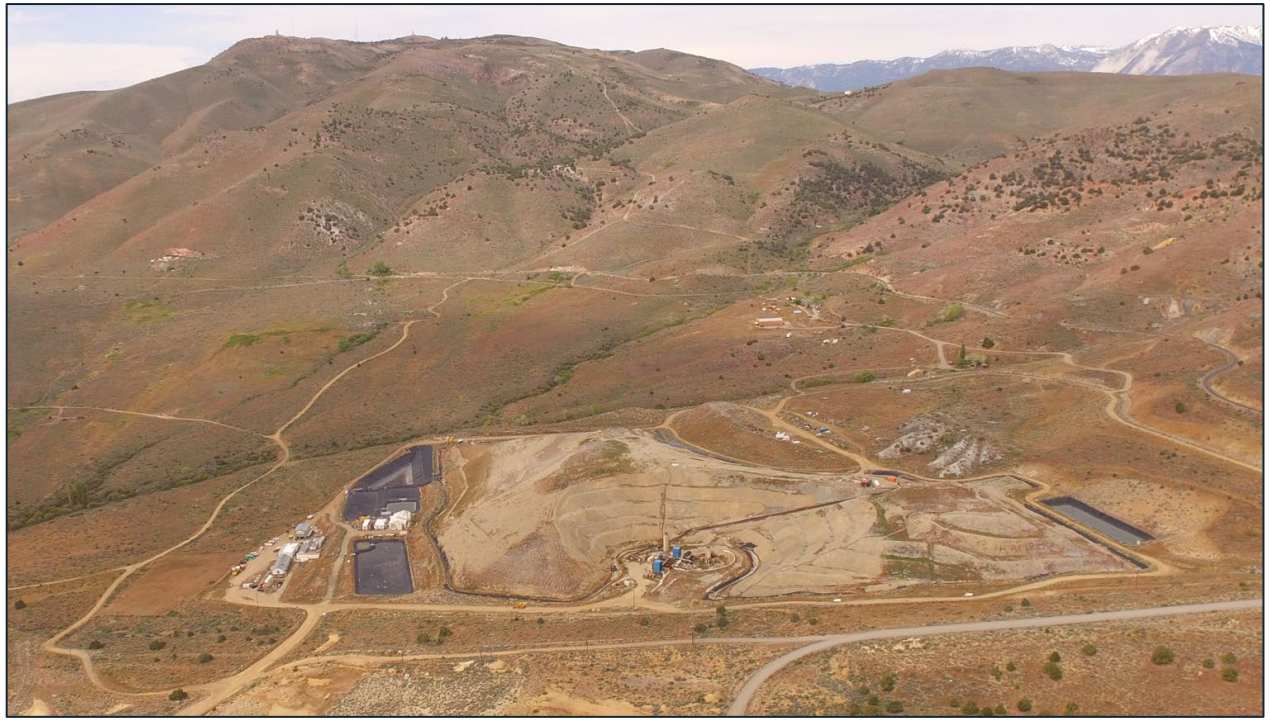

Quartz bodies
Stoped bonanzas
Location of potential bonanzas

APPENDIX

American Flats heap leach processing facility (included in acquisition that closed August 24, 2026)

FULLY PERMITTED 4500 TPD PROCESS FACILITIES

- Two-stage crushing circuit, including agglomeration drum and stacker, a heap leach facility, and a Merrill Crowe processing facility
- Facilities operated between 2012 and 2016, and since this time have been on care and maintenance
- A reclamation surety bond totaling approximately US$8.75M, including US$4M in cash collateral, is in place for the American Flats processing facility and the Lucerne open pit mine
- At closing, US$4M existing cash collateral for the surety bond held within a dedicated interest-bearing account was assigned to Mackay (effectively reducing the $8.75M liability to $4.75M)
- Future potential for restart and expansion

American Flats heap leach facility
